Bioelectrochemistry of Membranes Dieter Walz,Justin Teissié,Giulio Milazzo,2012-12-06 Bioelectrochemistry of Membranes is the last volume in the book series Bioelectrochemistry Principles and Practice that provides a comprehensive compilation of physicochemical aspects of different biochemical and physiological processes This sixth volume introduces basic knowledge and important electrochemical and biophysical aspects of membrane potentials lipid bilayers and cell membranes The volumes of this book series serve as source books for advanced students and researchers at all levels of bioelectrochemistry **Perspectives in Membrane Biophysics** D. P. Agin,1972 **Electrical Potentials in Biological Membrane Transport** Erich Heinz,1981 The material of this volume was originally planned to be incorporated in the preceding monograph Mechanics and Energetics of Biological Transport A separate and coherent treatment of the variety of bioelectrical phenomena was considered preferable mainly for didactic reasons Usually the biologist has to gather the principles of bioelectricity he needs from different sources and on different levels The present book intends to provide these

principles in a more uniform context and in a form adjusted to the problems of a biologist rather than of a physicist or electrical engineer. The main emphasis is put on the molecular aspect by relating the bioelectrical phenomena such as the membrane diffusion potentials, pump potentials or redox potentials to the properties of the membrane concerned and as far as possible to specific steps of transport and metabolism of ions and nonelectrolytes. Little space is devoted to the familiar and widely used representation of bioelectrical phenomena in terms of electrical networks of equivalent circuits with batteries, resistances, capacities etc. In order to elucidate the basic principles the formal treatment is kept as simple as possible using highly simplified models based on biological systems. The corresponding equations are derived in two ways: kinetically i.e. in terms of the Law of Mass Action as well as energetically i.e. in terms of Nonequilibrium Thermodynamics.
