Abstract. The first job of a proposed student system for free-floating environmental monitoring (first named *Environmental Monitoring System*, subsequently for brevity renamed *EnviroBot*) is to be implemented on a small robot platform. This project involves initially building a robot that can move, sense, and communicate. These initial steps are followed by the development of a system that can monitor the environment and report the results to a central database. The system is designed to be a self-contained, autonomous monitoring system.
