knowledge of the human brain to the field of education including reading learning language and mathematics This has resulted in the development of a number of new practices in education some good some bad and some just crazy Hence we

have had theories suggesting that listening to Mozart can boost intelligence foot massages can help unruly pupils fish oil can boost brain power even the idea that breathing through your left nostril can enhance creativity Sadly there is a gap between

what neuroscientists or cognitive psychologists know about brain mind functions and the supposedly scientific theory underlying the practices used daily in our schools So what has caused this wholesale embrace of neuroscience in the

classroom a well intentioned but naive misunderstanding of how science works ideological reasons or financial incentives Neuroscience in Education brings together an international group of leading psychologists neuroscientists and geneticists to

critically review some of these new developments examining the science behind these practices the validity of the theories on which they are based and whether they work It will be fascinating reading for anyone involved in education including
