

# A Brief History of Coding

It's easy to think that programming a machine to automate a process, or calculate a value, is a modern concept that's only really happened in the last fifty years or so. However, that assumption is quite wrong, coding has actually been around for quite some time.

01000011 01101111 01100100 01101001 01101110 01100111

Essentially all forms of coding are made up of ones and zeros - on or off states. This works for both a modern computer and even the oldest known computational device.

~87 BC

It's difficult to pinpoint an exact start of when humans began to 'program' a device. However, it's widely accepted that the Antikythera Mechanism is possibly the first 'coded' artefact. It's dated to about 87 BC and is an ancient Greek analogue computer and orrery used to predict astronomical positions.

~850 AD

The Banū Mūsā brothers, three Persian scholars who worked in the House of Wisdom in Baghdad, published the Book of Ingenious Devices in around 850 AD. Among the inventions listed was a mechanical musical instrument: a hydro-powered organ that played interchangeable cylinders automatically.

1800

Joseph Marie Jacquard invents a programmable loom, which used cards with punched holes to create the textile design. However, it is thought that he based his design on a previous automated weaving process from 1725, by Basile Bouchon.

1842-1843

Ada Lovelace translated the memoirs of the Italian mathematician, Francis Meneciani, regarding Charles Babbage's Analytical Engine. She made copious notes within her writing, detailing a method of calculating Bernoulli Numbers using the engine. This is recognised as the first computer program. Not bad, considering there were no computers available at the time.

A must have for anyone on the front lines of the Cyber War. Cedric Leighton Colonel USAF Ret. Cedric Leighton Associates. Dr Ransome Anmol Misra and Brook Schoenfield give you a magic formula in this book: the methodology and process to build security into the entire software development life cycle so that the software is secured at the source. Eric S Yuan Zoom Video Communications. There is much publicity regarding network security but the real cyber Achilles heel is insecure software. Millions of software vulnerabilities create a cyber house of cards in which we conduct our digital lives. In response, security people build ever more elaborate cyber fortresses to protect this vulnerable software. Despite their efforts, cyber fortifications consistently fail to protect our digital treasures. Why? The security industry has failed to engage fully with the creative, innovative people who write software. Core Software Security expounds developer-centric software security, a holistic process to engage creativity for security. As long as software is developed by humans, it requires the human element to fix it. Developer-centric security is not only feasible but also cost-effective and operationally relevant. The methodology builds security into software development, which lies at the heart of our cyber infrastructure. Whatever development method is employed, software must be secured at the source. Book Highlights: Supplies a practitioner's view of the SDL; Considers Agile as a security enabler; Covers the privacy elements in an SDL; Outlines a holistic business-savvy SDL framework that includes people, process, and technology; Highlights the key success factors, deliverables, and metrics for each phase of the SDL; Examines cost efficiencies, optimized performance, and organizational structure of a developer-centric software security program; and PSIRT. Includes a chapter by noted security architect Brook Schoenfield who shares his insights and experiences in applying the book's SDL framework. *Supercollider* 5 P. Hale, 2012-12-06. The fifth annual International Symposium on the Super Collider was a great success. Over 700 participants from around the country and the world gathered on May 6-8, 1993, in San Francisco to mark the progress of the SSC to discuss current issues and to chart a course of action for the continued development of our understanding of basic subatomic matter. Together, the American public, academic communities, private sectors, and governments from around the world have embarked on a project critical to maintaining our nation's preeminence as the world's leader in basic scientific research and the practical application of scientific knowledge. America has long maintained a commitment to investing in our nation's future. The Super Collider represents an essential next step in the direction of scope of human knowledge. The theme of the conference reflects these important goals: SSC Focusing the World on Next Generation Science. The challenge for us today is to spread the message of the importance of investing in America's future. This is our task and the task of supporters of the Super Collider throughout the nation. Without employing all of our energies, our nation will miss an historic opportunity to ensure America's scientific, technological, and economic leadership in the years ahead as we enter the next millennium. **Akin's Lodge Manual with the Georgia Masonic Code, the Standard for**
