Molecular mechanisms of cellular stress responses in cancer and their therapeutic implications Megan Chircop, Daniel Speidel, 2015-03-06 In response to stress cells can activate a myriad of signalling pathways to bring about a specific cellular outcome including cell cycle arrest DNA repair senescence and apoptosis This response is pivotal for tumour suppression as all of these outcomes result in restriction of the growth and or elimination of damaged and pre malignant cells Thus a large number of anti cancer agents target specific components of stress response signalling pathways with the aim of causing tumour regression by stimulating cell death However the efficacy of these agents is often impaired due to mutations in genes that are involved in these stress responsive signalling pathways and instead the oncogenic potential of a cell is increased leading to the initiation and or progression of tumourigenesis Moreover these genetic defects can increase or contribute to resistance to chemotherapeutic agents and or radiotherapy Modulating the outcome of cellular stress responses towards cell death in tumour cells without affecting surrounding normal cells is thus one of the ultimate aims in the development of new cancer therapeutics To achieve this aim a detailed understanding of cellular stress response pathways and their aberrations in cancer is required This Research topic aims to reflect the broadness and complexity of this important area of cancer research Index Medicus ,2002 Vols for 1963 include as pt 2 of the Jan issue Medical subject headings Targeting DNA damage response to enhance antitumor innate immunity in radiotherapy Qiang Zhang, Rachel Evans, Marco Tigano, 2023-09-08 Environmental Health Perspectives ,1993 **Reference Book of Credits for the Manufacturers and Wholesale Dealers in Iron, Steel, Metals, Machinery, Plumbers' Materials, Automobile and Electrical Supplies, Hardward and Kinderd Branches of the Trade ...** Iron and Steel Board of Trade, 1920 Durban and Surrounding Area South Africa.
