Cassian's Conferences Christopher J. Kelly, 2016-04-08 This book explores Cassian's use of scripture in the Conferences especially its biblical models to convey his understanding of the desert ideal to the monastic communities of Gaul Cassian intended the scriptures and implicitly the Conferences to be the voices of authority and orthodoxy in the Gallic environment He interprets familiar biblical characters in unfamiliar ways that exemplify his ideal By imitating their actions the monk enters a seamless lineage of authority stretching back to Abraham This book demonstrates how the scriptures functioned as a dynamic force in the lives of Christian monks in the fourth and fifth centuries emphasizes the importance of Cassian in the development of the western monastic tradition and offers an alternative to the sometimes problematic descriptions of patristic exegesis as allegory or typology Cassian has been described as little more than a provider of information about Egyptian monasticism but a careful reading of his work reveals a sophisticated agenda to define and institutionalize orthodox monasticism in the Latin West

Crawford, 2016-12-07 One remarkable ability of the human brain is to process large amounts of information about our surroundings to allow us to interact effectively with them In everyday life the most common way to interact with objects is by reaching grasping lifting and manipulating them Although these may sound like simple tasks the perceptual properties of the target object such as its location size shape and orientation all need to be processed in order to set the movement parameters that allow an accurate reach to grasp to lift movement Several brain areas work in concert to process this outstanding amount of visual information and drive the execution of a motor plan in just a few hundred milliseconds How are these processes orchestrated In developing this type of comprehensive knowledge about the interactions between objects perception and goal directed actions we have a window into the mechanisms underlying the functioning of the visuo motor system With this research topic we aim to further understand the neural mechanisms that mediate our interactions with the world Therefore we particularly encourage submission of papers that attempt to relate such findings to real world situations by investigating behavioural and neural correlates of information processing related to eye hand coordination and visually guided actions including reaching grasping and lifting movements This topic welcomes submissions of original research using any relevant techniques and methods from behavioural kinematics kinetics to neuroimaging and transcranial magnetic stimulation TMS as well as neuropsychological studies **Arts & Decoration** ,1928 **Current Index to Journals in**
