Múltiples estudios y publicaciones ponen de manifiesto que pese a este desarrollo formativo y tecnológico la vía aérea difícil sigue constituyendo si no el mayor desafío un reto diario de nuestra actividad ya que la morbi mortalidad asociada a las prácticas anestésicas sigue relacionada en un elevado porcentaje a un correcto y adecuado manejo de la vía aérea. Cerca de un tercio de todos los resultados adversos de la anestesia se deben a problemas respiratorios y de forma semejante también el 33% de las muertes post anestésicas son consecuencia de problemas relacionados con el manejo de la vía aérea cuyo peor escenario es la imposibilidad de intubar y/o ventilar una vía aérea difícil. Además en el 76% de los casos se considera que el procedimiento seguido no es el adecuado y se atribuye este déficit a una formación inadecuada. El control de la vía aérea es el componente primordial de las técnicas de anestesia general y de reanimación cardiopulmonar. Múltiples programas de formación lo
