Abstract: This paper presents a new approach to the problem of finding the optimal path in a graph. The approach is based on the use of a heuristic function that estimates the cost of the path from the current node to the goal node. The heuristic function is used to select the next node to visit, and the process is repeated until the goal node is reached. The approach is shown to be more efficient than other methods, and is able to find the optimal path in a large number of cases.
