Mars analogs: Environment, Habitability and Biodiversity Yiliang Li, André Antunes, Maggie CY Lau Vetter, David Flannery, 2023-06-15 Martian surface contains diverse lithologies from sedimentary rocks to mafic ultramafic igneous rocks and ground patterns These rocks record the late stage evolution on the Martian surface from a temperate environment with bodies of liquid water to the current cold and hyper arid environment The constraints on the key parameters and processes for water rock interaction sedimentation of materials and geomorphological development can provide important insights into the environmental change and habitability on the Martian surface However due to the difficulty in accessing Martian samples and limited remote sensing data available from the Martian surface most of the mysteries on Mars remain unraveled In this proposed research topic we will focus on geological settings on Earth that are similar to the conditions on Mars These Mars analogs are employed to infer possible processes on Mars and their impact on habitability and the search for life The Mars analogs on Earth span a variety of environments such as the super arid sedimentary plains e g the Qaidam Basin in the north of the Tibetan Plateau the Mojave Basin in the USA and the Atacama Desert in South America the subsurface fracture waters in Precambrian cratons e g the Canadian Shield the Fennoscandian Shield and the Kaapvaal Craton high salinity localities e g Laguna de T rez salt mines and deep sea brines as well as extremely cold and highly radiative environments e g polar regions thin atmosphere These settings on Earth are more accessible for collecting high quality mineralogical geochemical geochronological and microbiological data by the state of the art facilities These data can provide a solid cornerstone for us to understand the cycles of water and other life essential elements and their impact on habitability and biodiversity in extreme environments on Earth as well as the limits of life and the detection of biosignatures Such research can also provide vital insights on the search for life on other planets and moons Analytical Instrumentation Gillian McMahon, 2008-03-11 This valuable resource covers the principles of analytical instrumentation used by today s chemists and biologists and presents important advances in instrumentation such as the drive to miniaturise and lab on a chip devices In terms of the lab based analytical instrumentation the five main categories of technique spectroscopic chromatographic electrochemical imaging and thermoanalytical are included and presented in a practical not theoretical way Including relevant examples and applications in a number of fields such as healthcare environment and pharmaceutical industry this book provides a complete overview of the instruments used within the chemistry industry making this an important tool for professionals and students alike **Biogenic Amines on Food Safety** Claudia Ruiz-Capillas, Ana Herrero Herranz, 2019-07-16 Biogenic amines have been known for some time These compounds are found in varying concentrations in a wide range of foods fish cheese meat wine beer vegetables etc and their formations are influenced by different factors associated to those foods composition additives ingredients storage microorganism packaging handling conservation etc The intake of foods containing high concentrations of biogenic amines can present a health hazard Additionally they have been used to establish indexes in

various foods in order to signal the degree of freshness and or deterioration of food Nowadays there has been an increase in the number of food poisoning episodes in consumers associated with the presence of these biogenic amines mainly associated with histamines Food safety is one of the main concerns of the consumer and safety agencies of different countries EFSA FDA FSCJ etc which have as one of their main objectives to control these biogenic amines principally histamine to assure a high level of food safety Therefore it is necessary to deepen our understanding of the formation monitoring and reduction of biogenic amines during the development processing and storage of food even the effect of biogenic amines in consumers after digestion of foods with different levels of these compounds With this aim we are preparing a Special Issue on the topic of Biogenic Amines in Food Safety and we invite researchers to contribute original and unpublished research articles and reviews articles that involve studies of biogenic amines in food which can provide an update to our knowledge of these compounds and their impacts on food quality and food safety
