Rear Wheel Bearings

Remove the rear wheel from the fork, No. 1, Fig. 36. Remove the wheel and tire from hub assembly, No. 1.

Clean the bearings in the hub assembly.

Allow them to drain and repack the bearings with a good quality wheel bearing grease.

When reassembling wheel to fork, tighten the bolts, No. 3, Fig. 36, to 75-85 ft.-lbs. torque.

When reassembling wheel assembly to fork, ensure lockwasher is installed under nut, No. 5, Fig. 36, at both sides. Tighten the assembly until a slight drag is felt when the wheel is rotated by hand. Backen off nut approximately 1/8 turn to ensure the drag is removed.

Hydraulic Reservoir

Change the hydraulic filter element and clean the strainer unit, both of which are located inside the reservoir.

Details for doing this are given in "Servicing" section.

For Reference Only

The engine is equipped with an alternator (replaces generator) which does NOT require lubrication at periodic intervals.

SERVICING

This Section is intended to serve as a guide to servicing components at regular or irregular intervals to help keep your SeaDoo in good operational condition.

CARE OF BELTS

Regular checks should be maintained on the numerous drive belts on the SeaDoo. This is required for operational efficiency and to reduce running costs.

Here are some important facts about belt care:

1. Loose belts are caused by running too loose than too tight.
2. A loose belt flexes excessively which weakens the structure and causes the belt to slip.
3. An over-tight belt stretches excessively which weakens the structure. It also applies unnecessary pressure on the pulleys, shafts and bearings. No belt should be adjusted "tickle string" tight.
4. Never pry a belt over the rim of a pulley using a tool or object for leverage. This can rupture the structure of any belt, including a new one.

5. A new belt must always be checked frequently during the first two days of operation and adjusted as required.

6. Wipe off oil and grease immediately if it gets onto a belt. Clean the spots with a suitable solvent.

7. Don't use strong detergents or solvents to clean belts. Use mild soap and water and a brush if necessary.

8. The use of belt dressings is NOT recommended.

9. When a new belt is required, order it through your local MF Dealer Parts Dept. Don't rely on a tape measure or comparison with the old belt.

Fig. 37 - Air Cleaner Installation

AIR CLEANER

The air cleaner unit, shown in Fig. 37, filters the air drawn into the engine intake system.

The cleaner is a DRY-TYPE and NO oil must be used in the unit.

ONLY clean, dust-free air must be allowed to pass through the filter into the engine. Therefore, rigid maintenance and service MUST be performed throughout the life of the SeaDoo.

IMPORTANT: UNDER NO CIRCUMSTANCES SHOULD THE ENGINE BE RUN WITHOUT THE
