ABSTRACT

Background: Many public medical laboratories use automated techniques for analysis of samples due to the few number of laboratory staff required and the speed at which it operates. This study was carried out to compare haematological values obtained from automated techniques and manual techniques.

Method: A total of 86 apparently healthy adult Nigerians, aged 18-50 years comprising 50 males and 36 females who came for medical examination between June, 2004 and May, 2005 at Aminu Kano Teaching Hospital, Kano were used for the study. Standard manual methods and cell-dyn[®] 3700cs system techniques were used to determine haematocrit, total and differential leucocyte counts.

Results: Statistically significant differences were found between automated and manual techniques in males with regard to haematocrit levels, total white cell counts, differential monocyte and basophil counts ($0.45 \pm 0.03M$, $5.1 \pm 1.9 \times 10^9/L$, $0.54 \pm 0.19 \times 10^9/L$ and $0.11 \pm 0.08 \times 10^9/L$ respectively) for automation and $0.42 \pm 0.04M$, $4.4 \pm 1.4 \times 10^9/L$, $0.05 \pm 0.06 \times 10^9/L$ and $0.004 \pm 0.013 \times 10^9/L$ respectively for manual methods at $P < 0.001$, $P < 0.05$, $P < 0.001$ and $P < 0.001$ respectively while there were no significant differences in differential neutrophil, lymphocyte and eosinophil counts ($2.1 \pm 0.7 \times 10^9/L$, $2.2 \pm 0.7 \times 10^9/L$ and $0.14 \pm 0.16 \times 10^9/L$ respectively) of the automation when compared to $2.1 \pm 0.5 \times 10^9/L$, $2.1 \pm 0.5 \times 10^9/L$ and $0.09 \pm 0.09 \times 10^9/L$ respectively using manual methods ($P > 0.05$). There were no statistically significant differences between automated and manual methods in females with regard to total white cell count, differential neutrophil, lymphocyte and eosinophil counts ($5.8 \pm 2.3 \times 10^9/L$, $2.6 \pm 0.9 \times 10^9/L$, $2.4 \pm 0.8 \times 10^9/L$ and $0.1 \pm 0.1 \times 10^9/L$ respectively) of the automation when compared to $4.9 \pm 1.6 \times 10^9/L$, $2.5 \pm 0.7 \times 10^9/L$, $2.3 \pm 0.6 \times 10^9/L$ and $0.06 \pm 0.09 \times 10^9/L$ respectively of manual techniques ($P > 0.05$) while significant differences were observed in haematocrit, differential monocyte and basophil counts ($0.39 \pm 0.03M$, $0.55 \pm 0.3 \times 10^9/L$ and $0.1 \pm 0.09 \times 10^9/L$ respectively) of automation when compared to $0.37 \pm 0.03M$, $0.03 \pm 0.04 \times 10^9/L$ and $0.002 \pm 0.01 \times 10^9/L$ respectively of the manual methods at $P < 0.01$, $P < 0.001$ and $P < 0.001$ respectively.

Conclusion: The results have proven that differential monocyte and basophil counts from automation are unreliable and efforts should be made to carry out manual differential counts for confirmation.

INTRODUCTION

The concept of counting blood cells automatically began in the mid-1930s with a report discussing a photoelectric method for counting cells passing through a capillary tube using darkfield optics¹. In the late 1940s and early 1950s, two instruments were introduced and the first one was the modification of the original capillary method using darkfield optics while the second instrument was based on a completely new monoptical principle of cell counting through electrical gating or electrical impedance^{2,3}. In the early 1970s, two different techniques for automating differentials were refined sufficiently to be acceptable for clinical laboratory use and the principle of one is based on detecting cell images electronically and interpreting them with a computer programmed with descriptions while the other is based on light scatter and cytochemical staining for the identification of leucocytes⁴. The development of the automated haematology analyzer has been continuous with each step increasing the number of tests performed simultaneously, increasing the speed and decreasing the required sample volume^{5,6}.

Manual semi-automated or automated techniques can be used to determine the various elements of the full blood counts. Manual techniques are generally of low cost with regard to equipment and reagents but are labour intensive while automated techniques entail high capital costs but permit rapid performance of large number of counts by a small number of laboratory workers⁷. However, automated techniques are not designed to identify immature cells or other abnormal features of morphology such as toxic granulations, blast forms which can be categorized as between lymphocytes and monocytes while increased number of eosinophils may blend with other granulocytes or fall between monocytes and granulocytes^{8,9}.

Many laboratories now use automated

Lecture Notes Haematology N.C. Hughes-Jones, S. N. Wickramasinghe, Prof Chris Hatton, 2008-12-10 The Lecture Notes series is ideal for medical students junior doctors and other allied health professionals Lecture Notes Haematology concentrates on providing the required core subject knowledge and has been extensively revised and updated to reflect the considerable advances in the understanding of the molecular biology and pathogenesis of haematological disorders while continuing the tradition of successfully integrating the physiological pathological and clinical aspects of haematology Each chapter begins with a list of learning objectives that identifies the key elements that students need to know whilst also taking learning to the next level This new edition includes brief sections on the approaches to investigation and treatment of haematological problems the underlying mechanisms and relationships concerning lymphomas and other neoplastic diseases of the bone marrow and the rapidly changing area of bone marrow transplantation Illustrated in full colour throughout with new illustrations and photographs of important normal and abnormal blood cells this eighth edition is a comprehensive guide to haematology and an essential aid for anyone who wants a concise introduction to the subject **A Manual of Clinical Laboratory Methods** Clyde Lottridge Cummer, 1922 **The Handbook of Cuffless Blood Pressure Monitoring** Josep Solà, Ricard Delgado-Gonzalo, 2019-08-21 This book is the first comprehensive overview of the emerging field of cuffless blood pressure monitoring Increasing clinical evidence proves that longitudinal measurements of blood pressure allow for earlier detection and better management of multiple medical conditions and for superior prediction of cardiovascular events Unfortunately today's clinical and industry standards for blood pressure monitoring still require the inflation of a pneumatic cuff around a limb each time a measurement is taken Over the last decades clinicians scientists and device manufacturers have explored the feasibility of technologies that reduce or even completely eliminate the need of cuffs initiating the era of cuffless blood pressure monitoring Among the existing literature this book is intended to be a practical guide to navigate across this emerging field The chapters of the handbook have been elaborated by experts and key opinion leaders in the domain and will guide the reader along the clinical scientific technical and regulatory aspects of cuffless blood pressure monitoring **Wintrobe's Clinical Hematology** John P. Greer, 2009 Now available in a thoroughly revised Twelfth Edition Wintrobe's Clinical Hematology continues to be an industry leader with its ability to correlate basic science with the clinical practice of hematology With the first edition of Wintrobe's Clinical Hematology published in 1942 clearly establishing hematology as a distinct subspecialty of Internal Medicine the latest edition continues the influence of the Wintrobe name and helps to set this book apart from the competition With its strong focus on the clinical aspects of hematology the book has generated a strong following among internists and general practitioners who want a single resource to consult for their patients who present any blood related disorder The Twelfth Edition is in full color for the first time boasts a new editorial team and includes expanded coverage of new medications and four new chapters on Newborn Anemias Pathology of LHC

Provides a practical guide and manual for haematological investigation in children including laboratory methods and clinical interpretations of results. The approach is practical and diagnostic emphasizing basic technology. Material concentrates on the problems in obtaining adequate samples, interpreting the results and in analysing blood disorders in children where they differ from adults, namely where micro techniques can be performed on capillary blood and where normal ranges vary from those seen in adults even where techniques may be similar.
