You can transfer any of these facts from your head onto a blank sheet provided by the testing center. We also recommend reading the glossary as a last-minute cram tool before entering the testing center. Good luck.

- Late decelerations**—Occur after the peak of the contraction and mirror the contraction in length and intensity. These are caused by uteroplacental insufficiency. The intervention is to change the mother's position. If placenta is infusing, stop the infusion, apply oxygen, and increase the rate of IV fluids. Contact the doctor if the problem persists.
