

Hang Dry

At harvest, cannabis flowers should be carefully examined for signs of bud mold which can spread through your dry room. Fan leaves are removed, and whole plants are hung to dry, or branches are cut to form "hooks" at each node and hung on clothes hangars. Smaller leaves are left on the plant and will form a protective layer around the flowers as they dry. THC is degraded by light, and dry and cure areas should be kept dark.

Great cannabis can be ruined during the drying and curing process. Cannabis should be dried slowly, under low temperatures, to preserve the volatile monoterpenes that make it smell so nice.

Hang-drying cannabis branches slows the process by allowing moisture from the stem to migrate into the flower prior to evaporating into the environment.

Under Ideal drying conditions (60 F, 60% RH) cannabis usually takes about 14 days to hang dry. A grow tent with a portable AC makes a perfect drying chamber.

If your environment is too dry, the outer layer of your flowers will dry faster than the interiors. If outer leaves easily flake off and stems are still green after a week you may need to slow things down.

Paper bags create a great climate for slow drying. Branches can be placed in closed bags for a week or more to finish drying. This boosts the humidity in the bag, while allowing gas exchange with the outside environment. Stems should be brownish, and snap rather than bending when cannabis flowers are dry.
