Nasa Report South Polar Ice:

Enhancing NASA's Contributions to Polar Science National Research Council, Division on Earth and Life Studies, Polar Research Board, Committee to Review NASA's Polar Geophysical Data Sets, 2001-04-23 The high latitudes of the Arctic and Antarctic together with some mountainous areas with glaciers and long lasting snow are sometimes called the cryosphere defined as that portion of the planet where water is perennially or seasonally frozen as sea ice snow cover permafrost ice sheets and glaciers Variations in the extent and characteristics of surface ice and snow in the high latitudes are of fundamental importance to global climate because of the amount of the sun's radiation that is reflected from these often white surfaces Thus the cryosphere is an important frontier for scientists seeking to understand past climate events current weather and climate variability Obtaining the data necessary for such research requires the capability to observe and measure a variety of characteristics and processes exhibited by major ice sheets and large scale patterns of snow and sea ice extent and much of these data are gathered using satellites As part of its efforts to better support the researchers studying the cryosphere and climate the National Aeronautics and Space Administration NASA using sophisticated satellite technology measures a range of variables from atmospheric temperature cloud properties and aerosol concentration to ice sheet elevation snow cover on land and ocean salinity These raw data are compiled and processed into products or data sets useful to scientists These so called polar geophysical data sets can then be studied and interpreted to answer questions related to atmosphere and climate ice sheets terrestrial systems sea ice ocean processes and many other phenomena in the cryosphere The goal of this report is to provide a brief review of the strategy scope and quality of existing polar geophysical data sets and help NASA find ways to make these products and future polar data sets more useful to researchers especially those working on the global change questions that lie at the heart of NASA's Earth Science Enterprise

Johansen, 2017-09-15 This three volume set presents entries and primary sources that will impress on readers that what we do or don't do today regarding climate change will dramatically influence what life on this planet will be like for untold numbers of generations How are the behaviors of birds butterflies and other migratory animals connected to climate change What does the term thermal inertia mean and what does this geophysical effect have on predicting what the planet's future will be like What is the context for the effects we are seeing on various forms of animal life from migrating birds to polar bears to mosquitoes that transmit Zika and other diseases *Climate Change An Encyclopedia of Science Society and Solutions* combines entries describing Earth's variable climatic history references to scientific literature weather record data and selected primary documents to present readers with a comprehensive account of global warming's effects worldwide By examining verifiable quantitative information such as the frequency and intensity of hurricanes and changes in the hydrological cycle as well as clear patterns and trends of alternating droughts and deluges and wildfires melting ice and rising seas readers will be able to understand why scientists

are so concerned about the future of our climate Researchers will benefit from detailed explanations of scientific topics such as thermal inertia feedbacks and tipping points and receive invaluable context on the role of energy use in climate change including automobiles and air travel Readers will learn about the role of China in the current global climate and in the future the widespread effects of climate change on agriculture and how indigenous peoples lives are being impacted from drought and the Navajos to hunters lives in the Arctic The work concludes with thought provoking debates regarding potential solutions from wind power and solar power to geo engineering
