Energy Retrofit—Case Studies Ruediger Lohse, Ove C. Mørck, Alexander Zhivov, 2023-01-02 This book describes results of research conducted with the goal of providing a framework selected tools and guidelines to significantly reduce energy use by more than 50% in government and public buildings The scope of the book is limited to public buildings that were constructed before the 1980s with low internal loads e g office buildings dormitories barracks public housing and educational buildings and that were undergoing major renovation The book contains description and analysis of 26 well documented case studies from Europe Austria Denmark Estonia Germany Ireland Latvia Montenegro The Netherlands and the UK and the USA After these data were collected the case studies were analyzed with respect to energy use before and after renovation reasons for undertaking the renovation co benefits achieved resulting cost effectiveness and the business models followed Finally lessons learned were compiled and compared Deep Energy Retrofit DER is a major building renovation project in which site energy use intensity including plug loads has been reduced by at least 50% from the pre renovation baseline with a corresponding improvement in indoor environmental quality and comfort Lessons learned from the case studies and experiences of the team clearly indicate that DER can be achieved with the application of bundles of a limited number of core technologies readily available on the market Specific characteristics of some of these core technology bundles generally depend on the technologies available on an individual nation s market on the minimum requirements of national standards and on economics as determined by a life cycle cost LCC analysis *Government-wide Index to Federal Research & Development Reports*, 1965 **Programming Language Explorations** Ray Toal, Rachel Rivera, Alexander Schneider, Eileen Choe, 2017-08-09 Programming Language Explorations is a tour of several modern programming languages in use today The book teaches fundamental language concepts using a language by language approach As each language is presented the authors introduce new concepts as they appear and revisit familiar ones comparing their implementation with those from languages seen in prior chapters The goal is to present and explain common theoretical concepts of language design and

usage illustrated in the context of practical language overviews Twelve languages have been carefully chosen to illustrate a wide range of programming styles and paradigms The book introduces each language with a common trio of example programs and continues with a brief tour of its basic elements type system functional forms scoping rules concurrency patterns and sometimes metaprogramming facilities Each language chapter ends with a summary pointers to open source projects references to materials for further study and a collection of exercises designed as further explorations Following the twelve featured language chapters the authors provide a brief tour of over two dozen additional languages and a summary chapter bringing together many of the questions explored throughout the text Targeted to both professionals and advanced college undergraduates looking to expand the range of languages and programming patterns they can apply in their work and studies the book pays attention to modern programming practice covers cutting edge languages and patterns and provides many runnable examples all of which can be found in an online GitHub repository The exploration style places this book between a tutorial and a reference with a focus on the concepts and practices underlying programming language design and usage Instructors looking for material to supplement a programming languages or software engineering course may find the approach unconventional but hopefully a lot more fun

Mathematical Modelling of Meteoroid Streams Galina O. Ryabova, 2020-08-12 Modern computer power and high precision observational data have greatly improved the reliability of meteoroid stream models At present scientific research calls for two kinds of models precise ones for individual streams and statistically averaged ones for Solar System dust distribution models Thus there is a wide field of study open to stream modellers This brief describes step by step computer simulations of meteoroid stream formation and evolution Detailed derivations of relevant formulae are given along with plenty of helpful digestible figures explaining the subtleties of the method Each theoretical section ends with examples aimed to help readers practice and master the material Most of the examples are based on the Geminid meteoroid stream model which has been developed by the author in the last 30 years The book is intended for researchers interested in meteor astronomy and mathematical modelling and it is also accessible to physics and astrophysics students
