**Practical Manual on Insect Morphology and Systematics** Arun Kumar,DR. RAMA KANT DWIVEDI,DR. OMENDRA SHARMA,SHRAWAN KUMAR CHAURASIYA ,K. SINDHURA BHAIKAVI,2022-12-06 Objective To study the methods of collection and preservation of insects including immature stages Insect collection is a source of recreation for many people and may be a hobby for those who are interested in studying insects Methods of collection and preservation of insects are the pre requisite to study the insects and their various internal and external organs After collection it becomes imperative to keep and preserve the insect specimens intact and safe for longer time to further study the characters or to develop the insect collection museum Let s have a look and do the different types methods of collection devices used for collection and preservation of insects including immature stages in this practical session Why Make an Insect Collection An insect collection helps develop personal identification skills An insect collection can be used to display insects or insect features so that others may learn about them An insect collection can allow you to better observe details of insect structures and how they function An insect collection can provide a record of when and where various insects occur Places of insect collection They can be

collected from Air flying insects Water dragonflies mayflies and stone flies that hover over water aquatic insects and sea shore insects Home from furniture boxes bookshelves fleas bugs flies and mosquitoes flower fruits and vegetables brought in Debris and animal dung which acts as food source for many insects and from domestic animals and birds ecto and endo parasites Collecting Kit An old soft sided leather or canvas purse or a diaper bag with long shoulder straps makes an excellent collecting kit The kit must be large enough to hold the kill jars usually 2 and a couple of alcohol vials Other useful items include paper a pencil lots of plastic bags for ceps and a pry tool The bag must leave both hands free but have the equipment readily accessible to the collector Every collector needs a bag but bags can come in many variations from back packs to saddlebags

the biosphere between bacteria and viruses at one extreme amphibians and mammals at the other The size and general  
nature of insects present special problems to the student of entomology For example many commercially available  
instruments are geared to measure in grams while the forces commonly encountered in studying insects are in the milligram  
range Therefore techniques developed in the study of insects or in those fields concerned with the control of insect pests are  
often unique Methods for measuring things are common to all sciences Advances sometimes depend more on how something  
was done than on what was measured indeed a given field often progresses from one technique to another as new methods

are discovered developed and modified Just as often some of these techniques find their way into the classroom when the problems involved have been sufficiently ironed out to permit students to master the manipulations in a few laboratory periods Many specialized techniques are confined to one specific research laboratory Although methods may be considered commonplace where they are used in another context even the simplest procedures may save considerable time It is the purpose of this series 1 to report new developments in methodology 2 to reveal sources of groups who have dealt with and solved particular entomological problems and 3 to describe experiments which might be applicable for use in biology laboratory courses
