## La Science Asservie:

**La science asservie** Annie Thébaud-Mony, 2014-11-20 Dans les discours politiques la science est aujourd'hui de plus en plus convoquée pour noncer des vérités incontestables. Pourtant, suite de nombreux scandales sanitaires, un climat de suspensions est installé creusant un fossé entre les chercheurs et les citoyens. Chacun est alors confronté à ces questions essentielles s'agissant de la santé : qui croit, que nous cache-t-on ? À qui profite la science ? Ces questions sont au cœur de ce livre qui analyse comment de nombreux chercheurs ont participé à un processus de confiscation de la science au service des intérêts privés de grands groupes industriels, souvent avec la complicité active de l'État. Ils ont ainsi contribué à instaurer l'hégémonie d'une stratégie du doute quant aux risques industriels : amiante, plomb, nucléaire, pesticides, etc. et leurs conséquences. S'appuyant sur sa propre expérience professionnelle et sur celle de Henri P. Zerat, toxicologue connu pour son engagement scientifique et citoyen contre l'amiante, Annie Thébaud-Mony dénonce ici avec force le cynisme et l'impunité de ceux qui délibérément ont choisi la mort des autres pour leur plus grand profit. Ses révélations dressent un réquisitoire implacable qui invite à résister à l'imposture scientifique et à mettre en synergie, en matière de santé publique, savoirs scientifiques et savoirs citoyens. **La science**

**The Contamination of the Earth** Francois Jarrige, Thomas Le Roux, 2020-07-21 The trajectories of pollution in global capitalism from the toxic waste of early tanneries to the poisonous effects of pesticides in the twentieth century Through the centuries the march of economic progress has been accompanied by the spread of industrial pollution As our capacities for production and our aptitude for consumption have increased so have their byproducts chemical contamination from fertilizers and pesticides diesel emissions oil spills a vast plastic continent found floating in the ocean The Contamination of the Earth offers a social and political history of industrial pollution mapping its trajectories over three centuries from the toxic wastes of early tanneries to the fossil fuel energy regime of the twentieth century The authors describe how from 1750 onward in contrast to the early modern period polluted water and air came to be seen as inevitable side effects of industrialization which was universally regarded as beneficial By the nineteenth century pollutants became constituent elements of modernity The authors trace the evolution of these various pollutions and describe the ways in which they were simultaneously denounced and permitted The twentieth century saw new and massive scales of pollution chemicals that resisted biodegradation including napalm and other defoliants used as weapons of war the ascendancy of oil and a lifestyle defined by consumption In the 1970s pollution became a political issue but efforts local national and global to regulate it often fell short Viewing the history of pollution through a political lens the authors also offer lessons for the future of the industrial world

**Innovation in Clusters** Estelle Vallier, 2021-11-30 Forged at the heart of international political bodies by expert researchers the innovation cluster concept has been incorporated into most public policies in industrialized countries Based largely on the ideas behind the success of Silicon Valley several imitative attempts have been made to geographically group laboratories companies and training in particular fields in order to generate synergies between science and industry In its first part Innovation in Clusters analyzes the infatuation with the system of clusters that is integral to innovative policies

by analyzing its socio historical context its revival in management and its worldwide expansion looking at a French example at a local level In its second part the book explores a specialized biotechnology cluster dating back to the end of the 1990s The sociological survey conducted twenty years later sheds a different light on the dynamics and relationships between laboratories and companies contradicting the commonly held belief that innovation is made possible by geographical proximity
