### Linde Hydraulic Control (LHC)

#### Digital electro-hydraulic controller

Instead of a control lever, an electrical motor can operate the drive control technology, instead of a hydraulic actuator, a computer electronic controller instead with a very powerful microcontroller performs all control functions for the drive unit and the working hydraulics (2).

#### Adaptation to various trucks

The electronic control unit is capable of controlling trucks from a variety of series and with different drive concepts. To use different truck parameters and sensors, each truck model has a control that already identifies the truck.

#### Troubleshooting

The processor of the electronic control unit analyses analogue and digital signals. The processor interprets digital messages and system errors, and displays an error message on the display/monitor on the seat interface. In addition, the control unit activates a variety of functions according to the error's highest priority.

- Working light flashes
- Reversible operation of the manual counterbalance system
- The truck brakes with automatic brake release and off the target mode
- The truck brakes in the emergency function, the manual counterbalance system activates off
- An error code appears on display

These functions can be activated by switching off the counterbalance system with the key switch. During a fault, the control unit shows whether the error is self-correcting. If the error is no longer present, the truck resumes normal operation. If the error persists, the error code appears on the display and one of the recovery functions is activated.

#### Changing the controller

##### 4.1.1.1.1.1

Problems regarding component damage due to electrostatic discharge (ESD) damage to sensitive components will occur if the controller is moved.

The controller is equipped with a "float plug" which is attached to the back to avoid static damage. Connections must never be left open. The upper part of the controller and the software version of the controller can be read out via the back interface.

If the controller is replaced, the personnel work unit controller must be identified and plug adapted to the cable harness. All necessary information is available on the cable harness.
