*Million Dollar Data: Building Confidence - Vol.1* Stephen DeMeo, 2020-07-31 Global warming our current and greatest challenge is without precedent Among the many consequences that are impacting our society one unanticipated concern involves scientific truth When the President of the United States and others in his administration declare that global warming is fake science it calls into question what real science is and what real school science should be I will argue that real science is quality science one that is based on the rigorous collection of reliable and valid data To collect quality data requires bending over backwards to get things right and this is exactly what makes science so special Truth is made when scientists go this extra yard and devise controlled experiments collect large data sets confirm the data and rationally analyze their results Making scientific truth sounds difficult to do in the science laboratory but in reality there are many straightforward ways that truth can be constructed In the first of two volumes I discuss twelve such ways I call them Confidence Indicators that can allow students to strongly believe in their data and their subsequent results Many of these methods are intuitive and can be used by young students on the late elementary level all the way up to those taking introductory college science courses As in life science is not without doubt In the second volume I introduce the concept of scientific uncertainty and the indicators used to calculate its magnitude I will show that science is about connecting confidence with uncertainty in a specific manner what I refer to as the Confidence Uncertainty Continuum expression This important relationship epitomizes the scientific enterprise as a search for probabilistic rather than absolute truth This two volume set will contain a variety of ways that data quality can be instituted into a science curriculum To support its use many of the examples that I will present involve science teachers as well as student work and feedback from different grade levels and in different scientific disciplines Specific chapters will be devoted to reviewing the academic literature on data quality as well as describing my own personal research on this important but often neglected topic

**National History Standards** Linda Symcox, Arie Wilschut, 2009-04-01 As educators in the United States and Europe develop national history standards for K 12 students the question of what to do with national history

canons is a subject of growing concern Should national canons still be the foundation for the teaching of history Do national canons develop citizenship or should they be modified to accommodate the new realities of globalization Or should they even be discarded outright These questions become blurred by the debates over preserving national heritages by so called history wars or culture wars and by debates over which pedagogical frameworks to use These canon and pedagogical debates often overlap creating even more confusion A misconceived skills vs content debate often results Teaching students to think chronologically and historically is not the same as teaching a national heritage or a cosmopolitan outlook But what exactly is the difference Policy makers and opinion leaders often confuse the pedagogical desirability of using a framework for studying history with their own efforts to reaffirm the centrality of national identity rooted in a vision of their nation s history as a way of inculcating citizenship and patriotism These are the issues discussed in this volume Today s students are citizens of the world and must be taught to think in global supranational terms At the same time the traditionalists have a point when they argue that the ideal of the nation state is the cultural glue that has traditionally held society together and that social cohesion depends on creating and inculcating a common national culture in the schools From an educational perspective the problem is how to teach chronological thinking at all How are we to reconcile the social political and intellectual realities of a globalizing world with the continuing need for individuals to function locally as citizens of a nation state who share a common past a common culture and a common political destiny Is it a duty of history education to create a frame of reference and if so what kind of frame of reference should this be How does frame of reference knowledge relate to canonical knowledge and the body of knowledge of history as a whole

Strains in Ironwork Henry Adams,1898 **Designed to Fail** Roseann Liu,2024-03-20 A provocative examination of how systemic racism in education funding is sustained For people who care about urban school districts like Philadelphia s addressing the challenges that these schools face often boils down to the need for more money But why are urban districts that serve Black and Brown students still so perennially underfunded compared to majority white ones Why is racial equity in school funding so hard to achieve In *Designed to Fail* Roseann Liu provides an inside look at the Pennsylvania state legislature and campaigns for fair funding to show how those responsible for the distribution of school funding work to maintain the privileges of majority white school districts Liu analyzes how colorblind policies political structures and the maintenance of the status quo by people in power perpetuate wide and deepening racial disparities in education funding Taking a lesson from community organizers fighting for a racially equitable school funding system Liu s work is a bold call to address structural racism at the root and organize from a place of abundant justice

*Statistics for Imaging, Optics, and Photonics* Peter Bajorski,2011-10-17 A vivid hands on discussion of the statistical methods in imaging optics and photonics applications In the field of imaging science there is a growing need for students and practitioners to be equipped with the necessary knowledge and tools to carry out quantitative analysis of data Providing a

self contained approach that is not too heavily statistical in nature Statistics for Imaging Optics and Photonics presents necessary analytical techniques in the context of real examples from various areas within the field including remote sensing color science printing and astronomy Bridging the gap between imaging optics photonics and statistical data analysis the author uniquely concentrates on statistical inference providing a wide range of relevant methods Brief introductions to key probabilistic terms are provided at the beginning of the book in order to present the notation used followed by discussions on multivariate techniques such as Linear regression models vector and matrix algebra and random vectors and matrices Multivariate statistical inference including inferences about both mean vectors and covariance matrices Principal components analysis Canonical correlation analysis Discrimination and classification analysis for two or more populations and spatial smoothing Cluster analysis including similarity and dissimilarity measures and hierarchical and nonhierarchical clustering methods Intuitive and geometric understanding of concepts is emphasized and all examples are relatively simple and include background explanations Computational results and graphs are presented using the freely available R software and can be replicated by using a variety of software packages Throughout the book problem sets and solutions contain partial numerical results allowing readers to confirm the accuracy of their approach and a related website features additional resources including the book s datasets and figures Statistics for Imaging Optics and Photonics is an excellent book for courses on multivariate statistics for imaging science optics and photonics at the upper undergraduate and graduate levels The book also serves as a valuable reference for professionals working in imaging optics and photonics who carry out data analyses in their everyday work
