$$14 - 5 =$$

The **difference** is the number you land on!

Developing Mathematical Reasoning Pamela Weber Harris, 2025-02-18 Math is not rote memorizable Math is not random guessable Math is figure out able Author Pam Harris argues that teaching real math that is free of distortions will reach more students more effectively and result in deeper understanding and longer retention This book is about teaching undistorted math using the kinds of mental reasoning that mathematicians do Memorization tricks and algorithms meant to make math easier are full of traps that sacrifice long term student growth for short lived gains Students and teachers alike have been led to believe that they've learned more and more math but in reality their brains never get any stronger Using these tricks may make facts easier to memorize in isolation but that very disconnect distorts the reality of math The mountain of trivia piles up until students hit a breaking point Humanity's most powerful system of understanding organizing and making an impact on the world becomes a soul draining exercise in confusion chaos and lost opportunities

Developing Mathematical Reasoning Avoiding the Trap of Algorithms emphasizes the importance of teaching students increasingly sophisticated mathematical reasoning and understanding underlying concepts rather than relying on a set rule for solving problems This book illuminates a hierarchy of mathematical reasoning to help teachers guide students through various domains of math development from basic counting and adding to more complex proportional and functional reasoning Everyone is capable of understanding and doing real math This book Highlights the important mathematical relationships strategies and models for students to develop Offers personal stories reflection sections and extensive practical exercises for easy implementation Includes real math a lot of it to provide teachers with examples they can put to use in their classrooms immediately This book is a valuable resource for educators looking to reach more students by building a strong foundation of mathematical thinking in their students By addressing common misconceptions about math and providing practical strategies for teaching real math this book shows that everyone can use the mathematical relationships they already know to reason about new relationships In other words everyone can math

Flexible Strategies for Sensory Integration During Motor Planning Samuel Judah Sober,2005 The brains success in perceiving and interacting with the world depends on its ability to assimilate multiple streams of sensory information One particularly important sensory integration problem concerns the use of sensory feedback from the body to plan and execute arm movements Information about arm position is available to both vision and proprioception and these signals must be integrated in order to plan accurate reaches Although both modalities can encode arm position the question of how the brain weights these signals has not been systematically investigated To address this issue we developed a psychophysical technique for quantifying the relative reliance on vision versus proprioception during reach planning Subjects planned and executed reaching movements while receiving virtual visual feedback By analyzing the reaching errors that resulted from shifting the visual feedback away from the true hand position we measured sensory integration at two different stages of reach planning As described in Chapter 1 we found that the first planning stage relies mostly on visual information whereas the second stage relies more on proprioceptive signals This difference suggests that the planning computations performed at each stage inform the selection of sensory input This hypothesis is further supported by the results presented in Chapter 2 in which we show that altering the details of the sensorimotor task drives changes in sensory integration In Chapter 3 we explore the consequences of sensorimotor adaptation on sensory integration and show that the effects of learning can drive changes at a single stage of reach planning Lastly Chapter 4 presents a set of hypotheses about where and how the two planning stages might be implemented in the primate brain and suggests a series of experiments designed to confirm the computational role of single neurons
