Energy: The Fuel of Civilization Brian M. Holmes,2016-04-21 Energy is the lifeblood of human society You and I would not live in the advanced world that we live in without the abundant and energy dense fuels that we now have available to us In the 21st century we have a wide range of energy sources that power our devices and that enable our technological advances and our increasingly middle class population As a result we must not curtail energy rich fuel sources for political or ideological reasons Switching to unreliable less efficient more expensive energy sources before those alternatives are ready to fill the shoes of being primary energy sources in our personal lives and economy is ill advised at best destructive and self defeating at worst This book dives into the good and the bad regarding environmentally friendly energy sources and discusses all the

energy sources we have available to us conservation efforts and the politics of energy We also look at statistics regarding energy usage and production from the past present and projections for the future We even review possible future energy sources including some pie in the sky ones Join the important discussion about energy and how our energy choices will shape our future
