Torrez, 2008 Research has shown that riding a motorcycle can potentially be much more dangerous than operating a conventional vehicle There are factors inherent in driving or riding a small two wheeled vehicle such as a motorcycle moped or even bicycle that can potentially decrease their ability to be seen or noticed by other drivers This disadvantage is reflected in the disproportionate overrepresentation of injuries and or fatalities incurred by this particular driving group This creates a significant problem which deserves dedicated evaluation as to causative factors and or influential variables The following research was conducted with intentions to investigate the topic of motorcycle conspicuity so as to further explain the variables which positively contribute to a motorcycle being seen and to supplement the body of knowledge that currently exists on this topic This study specifically evaluated the influence of sex age motorcycle lighting conditions and vehicular daytime running lights upon one's ability to effectively detect a motorcycle within a high fidelity simulated environment This research additionally sought to examine the feasibility and validity of using a novel fixed base high fidelity simulator for the evaluation of motorcycle conspicuity The results from this research clearly indicate a link between vehicular DRLs and the effective detection of motorcycles and also support previous research as to the effectiveness of motorcycle DRLs Additionally these results suggest that as one ages certain degradations in vision cognition and physiology occur which decrease one's performance in detecting and responding to a motorcycle These findings additionally provide support for the use of a high definition fixed base simulator as a valid technology for the evaluation of motorcycle conspicuity **The Impact of a Motorcycle Lights-on Law** Patricia F. Waller, Lindsay I. Griffin, 1977 Motorcycle Headlamps Motorcycle Lighting Committee, 2020 This SAE Standard provides test procedures performance requirements design guidelines and installation guidelines for motorcycle headlamps This

revision to SAE J584 was developed by a task force containing members of the Lighting Systems Group and the Specialized Vehicle and Equipment Motorcycle Committee. The photometric test point tables were updated to figures. The titles were updated to match the current classifications of motorcycles in SAE J213 and the application was changed to only be dependent on speed not engine size. A section was added to allow additional light with the low beam or high beam while the motorcycle is leaning. Bank lighting was defined for this application. The UN regulations use the term bend lighting but SAE already uses that term in adaptive forward lighting systems. The photometric requirements started at the HV line but was moved to 0.5U to work with existing SAE test points. An option was added to aim the headlamp to the low beam as opposed to the high beam. This was added to encourage harmonization with UN motorcycle regulations as well as automotive regulations. The aiming method is based on SAE J1383, SAE J583 and the UN symmetrical beam headlamp regulation. Discussion occurred on the value of the maximum gradient and the position of the gradient when aiming. The aiming adjustment requirements were reviewed extensively. After initially retaining the requirement of 4 degrees and adding an allowance as a function of vehicle pitch angle, a simplified wording was agreed on which requires vertical adjustment and allows horizontal adjustment. The text was moved to 6.4. The aiming adjustment tests, clarity of hot spot and inward force test sections were all removed. In addition to the items explained above, the following updates have been made: Updated the format of the document to current SAE standards. Added SAE J2595 and SAE J2650 to 2.1.1. Added 2.2. Added SAE J387 to 2.2.1. Revised the definition of motorcycle headlamp. Added definition for bank lighting. Added optical axis mark and trademark indication. Updated the names of SAE J575 tests in 5.1. Moved beam aim during photometric test section to 5.1.1 and 6.1.1. Reorganized photometric design requirements into appropriate sections under test and performance requirements. Added a note allowing adaptive driving beam devices. SAE J3069 was not referenced because it is written for automobiles not motorcycles. Revised wording in 7.1. The task force discussed removing the single beam photometric figures but did not receive enough useful feedback on whether it was feasible so it remains in the document. The task force also developed an additional set of harmonized photometric figures that would function as a harmonized pattern with the SAE and UNECE requirements. These figures were checked by several headlamp manufacturers using existing lamp photometry to verify the feasibility of the requirements. However, the UN body is working toward a significant modification to the existing regulations so the SAE J584 task force is delaying incorporation of the harmonized figures until the new UN regulations are established.

This engineering design specification provides parameters and general requirements for auxiliary front lamps to be used on motorcycles. This document has been updated to the latest format required by TSB requirements. This was a major change to the structure of the document however the content did not change significantly with the following exception. We added a new optional

photometric table 2 to provide an optional beam that is significantly wider and will supplement the headlamp whether it is used in conjunction with the low beam or high beam and we endeavored to make the document technology neutral changing references to bulbs for example and replacing it with light source      Motorcycle Safety Jeffrey N.
