Neale, Lenox Hawes Rand, Edward Barney Sturgis, Joseph Zimmerman, 1925 *The Natural History of Primates* Robert W. Sussman, Donna Hart, Ian C. Colquhoun, 2022-10-20 The interest in primates from lemurs to gorillas has never been greater. Primatologists are continually finding evidence in the behavior and ecology of our closest genetic relatives that sheds light on human origins. So just who are these 520 species of complex and intelligent mammals inhabiting the Neotropics, Africa, Madagascar, and Asia? *The Natural History of Primates* provides the most current information on wild primates from experts who have studied them in their natural environments. This volume provides up-to-date facts and figures on how groups of social primates interact with each other and the plants and other animal species in their ecosystems; what they eat; which predators might eat them; how males and females seek mates; how infants are raised; and myriad other fascinating details about their visual and vocal communication, their ability to craft and use tools, and the varieties of locomotion they employ. As human populations continue to expand into the rainforests, savannas, and woodlands where nonhuman primates dwell, the preservation of these species becomes ever more important. *The Natural History of Primates* is unique in its emphasis on the conservation status of primate species and its ample discussions of how humans and nonhuman primates can coexist in the twenty-first century.

Asdell's Patterns of Mammalian Reproduction Virginia Douglass Hayssen, Ari Van Tienhoven, Ans Van Tienhoven, 1993 Since the appearance of the second edition of Sydney A. Asdell's widely used *Patterns of Mammalian Reproduction* in 1964, the field of reproductive physiology has expanded dramatically. Accordingly, this revision adopts a different structure from previous editions, substituting empirical delineations for physiological interpretations. With the emphases now on a presentation of the published facts of mammalian reproduction, it provides a thorough compilation of what is known about the basic reproductive biology of each of the 4300 mammalian species. To gather information, the authors examined more than 20 000 publications dating up to 1992. They used primary sources as much as possible, supplementing them with English translations of Russian, Finnish, Chinese, and Japanese journals. The data are presented in taxonomic order. Each familial account summarizes the pattern of reproduction for the family and provides lists of citations arranged by topic of the literature on the endocrinology, reproductive anatomy, and reproductive physiology of the family. Following each account is a tabular listing of species-specific data for neonatal mass and size, weaning mass and size, litter size, age at sexual maturity, estrous cycle length, gestation length, lactation length, number of litters per year, and seasonality of reproduction. For each of these reproductive variables, the range of data gleaned from the literature is given together with the source of each value listed. Virginia Hayssen is Assistant Professor of Biology at Smith College. Ari Van Tienhoven is Professor of Animal Physiology Emeritus at Cornell University. Ans Van Tienhoven assisted in the compilation of data for the book.
