Lifetime Oriented Structural Design Concepts:

Lifetime-Oriented Structural Design Concepts Friedhelm Stangenberg, 2009-11-26 Safety and reliability are important for the whole expected service duration of an engineering structure Therefore prognostical solutions for different building types are needed and uncertainties have to be handled Life cycle strategies to control future structural degradations by concepts of appropriate design have to be developed in case including means of inspection maintenance and repair Aspects of costs and sustainability also matter The Cooperative Research Center for Lifetime Oriented Design Concepts SFB 398 at Ruhr University in Bochum combines the wide range of scientific topics between structural engineering structural and soil mechanics and material sciences regarding structural lifetime management in this present extraordinary monolithic format The characterization and modeling of lifetime related external actions of multiple origin are presented in this book as well as the physical description the modeling and the validation of material degradation Adaptive numerical methods and simulation techniques are provided for the lifetime oriented design concepts to forecast material and structural degradation Stochastic aspects mathematical optimization methods and interactions between various influences are included Thus a solid basis is provided for future practical use and also for standardization of structural design with respect to lifetime prediction
