SUBJECT: Comparison of Body Shake and
Ride of Car No. 5830 (Convertible)
Before and After Dynamic Wheel
Dampeners were Installed. EO-1742.

Car No. 5830 was tested on the Proving Ground Rough Track as a production car before it was turned over to the G. M. Engineering Staff for modifications to reduce body shake. On the attached table can be found the list of experimental parts and modifications made by the above group.

The car was tested again last week with and without the cross-shake control-bar from the engine to the front fender. The comparison of all 3 runs follows:

	<u>Vertical Disp.</u> <u>LF Fender</u>	<u>Lateral Disp.</u> <u>W/S Header</u>	<u>Lateral Disp.</u> <u>Steering Column</u>
1. Production Car 1-7-55	.625"	.392"	-----
2. Car with modifications as per attached table except that the tire pressure was dropped to 22 psi front, and 20 psi rear.	.265"	.218"	.116"
3. Car as in No. 2, but with cross-shake control-bar attached.	.238"	.171"	.132"

Generally it is felt by various observers that the modified car is a marked improvement over a production convertible with respect to both body-shakes and softness of ride. However, the ride is considered to be lacking in sufficient shock absorber control which allows the front and rear suspension to bottom in compression, and the front to bottom on rebound.

It is felt that if the 1956 sedan shock absorbers were installed, the bottoming condition would be helped. The dynamic wheel dampers would have to be retuned for maximum effectiveness after a shock absorber change.
