**The ^APolitical Economy of Automotive Industrialization in East Asia** Richard F. Doner, Gregory W. Noble, John Ravenhill, 2021-04-21 Despite starting from equally low levels of performance and initially similar strategies the seven most prominent auto industries in East Asia outside Japan have ended up with strikingly different types and levels of development This book argues that factors such as market size and economic policies alone cannot explain this puzzle Instead the book highlights the significance of two sets of factors the very different institutional capabilities required to formulate and carry out policies and the political pressures that help to explain the emergence of these capabilities *Constructing European Union Trade Policy* Gabriel Siles-Brügge, 2014-02-18 With the stagnation of the Doha Round of multilateral talks trade liberalisation is increasingly undertaken through free trade agreements Gabriel Siles Brügge examines the EU's decision following the 2006 Global Europe strategy to negotiate such agreements with emerging economies Eschewing the purely materialist explanations prominent in the field he develops a novel constructivist argument to highlight the role of language and ideas in shaping EU trade policy Drawing on extensive interviews and documentary analysis Siles Brügge shows how EU trade policymakers have privileged the interests of exporters to the detriment of import competing groups creating an ideational imperative for market opening Even during the on going economic crisis the overriding mantra has been that the EU's future well being depends on its ability to compete in global markets The increasingly neoliberal orientation of EU trade policy has also had important consequences for its economic diplomacy with the developing economies of the African Caribbean and Pacific group of states *Design and Analysis of Composite Structures for Automotive Applications* Vladimir Kobelev, 2019-06-10 A design reference for engineers developing composite components for automotive chassis suspension and drivetrain applications This book provides a theoretical background for the development of elements of car suspensions It begins with a description of the elastic kinematics of the vehicle and closed form solutions for the vertical and lateral dynamics It evaluates the vertical lateral and roll stiffness of the vehicle and explains the necessity of the modelling of the vehicle stiffness The composite materials for the suspension and powertrain design are discussed and their mechanical properties are provided The book also looks at the basic principles for the design optimization using composite materials and mass reduction principles Additionally references and conclusions are presented in each chapter *Design and Analysis of Composite Structures for Automotive Applications Chassis and Drivetrain* offers complete coverage of chassis components made of composite materials and covers elastokinematics and component compliances of vehicles It looks at parts made of composite materials such as stabilizer bars wheels half axes springs and semi trail axles The book also provides information on leaf spring assembly for motor vehicles and motor vehicle springs comprising composite materials Covers the basic principles for the design optimization using composite materials and mass reduction principles Evaluates the vertical lateral and roll stiffness of the vehicle and explains the modelling of the vehicle stiffness Discusses the composite materials for the
