If you do any kind of workout you understand that what you eat defines your success and your body By now you know that kitchen scales are your best friend if not you will find out very soon You need to stick to your calories and macros that are in your personal meal plan as much as possible You also know that prepping your food can be very time consuming especially if you are not sure how much you should eat from certain types of food I know all of this I have been through the same I am here to help you With this book I am about to save you a lot of time When I started to do my workout and follow my meal plan it took me a while to prepare it all correctly so I decided to create a database for myself where I entered all sorts of food and I re searched all nutrition info for this I would like to share my tables with you that show calories carbs fat and protein for different types of food in different amounts All you need to do is to look at your meal plan match your macros with the help of this book and add it all up This book also contains some tips that helped me a lot either to save time or save calories carbs and fat Yes you do need a set of scales It does not matter what sort of scales they are as long as they are kitchen scales They all do one thing measure the amount and weight of your food

Yes you will still need to do some maths however the content of this book will help you massively and save you a lot of time The whole point of following a sustainable macro based diet is that it s flexible You can eat oven baked chicken with rice and carrot for the rest of your life if you wish but I do not think many people could and would do that We need variety And if you calculate your macros you can create amazing meals all the time You need to love what you eat otherwise it will not be sustainable and you will not get the results you would like to see This book contains a lot of food with their calories and macros most starting from as small as 5g to 600g of weight so you do not have to look up nutrition info for each item you want to use and calculate the calories and macros it will save you a lot of time Some people like using macro tracking apps and it s great if that works for you the downsides are Many of these apps allow anyone to enter anything which means it might not be accurate If the app was created let s say in the US or Europe it will be full of American or European products but not so many from anywhere else in the world You still need to enter nutrition info if you can not find it on the app Many apps will have in app purchases which means you might not be able to use all options or you can use the app only for a certain amount of time for free I do not put the success of my hard work in the hands of someone entering the info I research everything very carefully and to the best of my knowledge these are the very calculations I use myself I am also old school and like to write it down with a pen It makes me feel good Psychologically if you actually write something down on a piece of paper it is more powerful than some virtual numbers So I am not an app person when it comes to macros In this book I ll give you some tips on how to save calories carbs and fat and how to make up if you are not hitting your protein target or consumed too much fat for your lunch I also left many empty spaces for you where you can write down YOUR favourite food You can create your favourite breakfasts and meals and easily adjust the recipes you like By the end of this book you will be able to calculate your macros easily create your own recipes and you will have 3 breakfasts 5 10 mains and 3 treats to get you started I wish you all the best for your lifestyle change and fitness journey
