Macroeconomic Analysis And Parametric Control Of A National Economy:

Macroeconomic Analysis and Parametric Control of a National Economy Abdykappar A. Ashimov, Bahyt T. Sultanov, Zheksenbek M. Adilov, Yuriy V. Borovskiy, Dmitriy A. Novikov, Rakhman A. Alshanov, Askar A. Ashimov, 2012-11-08

This is a sequel to the book by Dr A Ashimov and his colleagues **Macroeconomic Analysis and Economic Policy Based on Parametric Control** The authors have expanded both the developed mathematical apparatus and the scope of problems and applications stemming from the practice of steering a national economy of a small country in the dynamic environment of the international economic order The developed theoretical foundation is used in Chapter 1 to suggest a decision support system operating in the framework of state economic policy making Chapter 2 presents various mathematical models built on the basis of the available statistical data and provides quality assessment of these models Parametric control problems are being formulated on the basis of these models as problems of mathematical programming and the obtained solutions are subjected to analyses and interpretations This is demonstrated by the analysis of the effect of uncontrollable factors on the problem solutions Chapter 3 is aimed at the modelling and analysis of cyclic phenomena in economics and their structural stability Chapter 4 presents solutions of specific problems of national economy and analysis and interpretation of their solutions In summary the authors formulate comprehensive mathematical models of some critical mechanisms in micro economics previously known only on a qualitative level They provide vigorous mathematical analysis of the models that justifies their applicability for the formulation of parametric control problems and the existence of model based solutions The complexity of the resultant problems is addressed by the formulation of the appropriate algorithms The described methodology leads to the development of computer based decision support systems

Macroeconomic Analysis and Economic Policy Based on Parametric Control Abdykappar A. Ashimov, Bahyt T. Sultanov, Zheksenbek M. Adilov, Yuriy V. Borovskiy, Dmitriy A. Novikov, Robert M. Nizhegorodtsev, Askar A. Ashimov, 2011-11-25

After the transition to free economy governments of the former Soviet republics realized that in spite of becoming a part of the shaky international economic order their individual economic success can be assured by rational national economic policies that in addition to the fundamental law of supply and demand govern the economic mechanism sensitive to both external and internal phenomena Originally published in Russian and now translated in English this book by Dr A Ashimov and his colleagues offers a novel theory providing a numerically justifiable approach to the solution of major economy control problems that are faced by virtually every government in the world First they developed and validated numerous mathematical models describing complex interactions between economic and social factors thus enabling the decision makers to foresee the outcomes of their decisions Second on the basis of these models the authors formulated the appropriate control problems that could be interpreted as achieving the transition to the desirable economic regimes and maintaining these regimes in spite of initial conditions and both external and internal perturbations It should be noted that due to the inherent uncertainty introduced by the use of statistical models the

nonlinearity of the underlying phenomena and the intention to obtain the optimal solutions the solution process becomes quite intricate and calls for the application of the most sophisticated techniques offered in advanced control theory The authors utilized the most instrumental statistical model validation techniques they established sufficient conditions for the existence of optimal solutions of the relevant control problems and they skillfully combined the applications of the phase space formalism system stability analysis and the methods of functional analysis Finally they developed algorithms resulting in the optimal problem solutions thus offering economic policy makers a dependable decision support tool Macroeconomic Analysis and Economic Policy Based on Parametric Control offers a novel highly mathematical approach to the solution of very realistic economy control problems It presents a good example of the application of mathematical modeling advanced control theory and model based decision making that could be adopted by researchers and graduate students specializing in economics control and relevant areas of research addressing their own research problems

Cybernetics and Systems

Sergio Barile,Raul Espejo,Igor Perko,Marialuisa Saviano,2018-12-07 Society is now facing challenges for which the traditional management toolbox is increasingly inadequate Well grounded theoretical frameworks such as systems thinking and cybernetics offer general level interpretation schemes and models that are capable of supporting understanding of complex phenomena and are not impacted by the passage of time This book serves the knowledge society to address the complexity of decision making and problem solving in the 21st century with contributions from systems and cybernetics A multi disciplinary approach has been adopted to support diversity and to develop inter and trans disciplinary knowledge within the shared thematic of problem solving and decision making in the 21st century Its conceptual thread is cyber systemic thinking and its realisation is supported by a wide network of scientists on the basis of a highly participative agenda The book provides a platform of knowledge sharing and conceptual frameworks developed with multi disciplinary perspectives which are useful to better understand the fast changing scenario and the complexity of problem solving in the present time
