Financial Crises, Macroeconomic Shocks, and the Government Balance Sheet: A Panel Analysis Matteo Ruzzante,2018-04-24 Government financial assets are increasingly recognized as playing an important role in assessing fiscal sustainability However very little research has been done on the dynamics of government financial assets compared to liabilities In this paper we investigate the impact of recent financial crises and macroeconomic shocks on government balance sheets decomposing the separate effects on financial assets and liabilities Using quarterly Government Finance Statistics GFS data we analyze a panel of 27 countries over the period 1999Q1 2017Q1 through fixed effects and panel VAR techniques Financial crises are shown to deteriorate the net financial worth of governments but no significant impact is found on assets suggesting that they are not being used as fiscal buffers in bad times On the contrary countries that suffered both financial and banking crises experienced an artificial increase of their asset position through bank bailouts Macroeconomic shock analyses reveal that government balance sheet items are countercyclical but important asymmetries are found in their dynamics

*The Macroeconomics of the Great Depression* Ben Bernanke,1994 Recently

research on the causes of the Great Depression has shifted from a heavy emphasis on events in the United States to a broader more comparative approach that examines the interwar experiences of many countries simultaneously In this lecture I survey the current state of our knowledge about the Depression from a comparative perspective On the aggregate demand side of the economy comparative analysis has greatly strengthened the empirical case for monetary shocks as a major driving force of the Depression an interesting possibility suggested by this analysis is that the worldwide monetary collapse that began in 1931 may be interpreted as a jump from one Nash equilibrium to another On the aggregate supply side comparative empirical studies provide support for both induced financial crisis and sticky nominal wages as mechanisms by which nominal shocks had real effects Still unresolved is why nominal wages did not adjust more quickly in the face of mass unemployment
