dynamic general equilibrium framework to examine the frictions in the economy that make money and liquid assets play a useful role in trade. They discuss such topics as cashless economies, the properties of an asset that make it suitable to be used as a medium of exchange, the optimal monetary policy and the cost of inflation, the coexistence of money and credit and the relationships among liquidity, asset prices, monetary policy and the different measures of liquidity in over the counter markets. The second edition has been revised to reflect recent progress in the New Monetarist approach to payments and liquidity. Rocheteau and Nosal have added three new chapters on unemployment and payments on asset price dynamics and bubbles and on crashes and recoveries in over the counter markets. The chapter on the role of money has been entirely rewritten adopting a mechanism design approach. Other chapters have been revised and updated with new material on credit economies under limited commitment, open market operations and liquidity traps and the limited pledgeability of assets under informational frictions.
