

Male Of The Species

Samuel Hubbard Scudder

Male Of The Species:

Primate Males Peter M. Kappeler, 2000-05-04 The size and composition of primate groups varies tremendously across species within species and within groups over time The most variable quantity is the number of adult males In some groups single males can monopolize access to several females whereas reproduction is shared among several males in other groups This variation lies at the heart of understanding adaptive variation among social systems Whether groups contain single or multiple males has important consequences for reproductive strategies of both sexes and also shapes these animals morphology and behaviour Written by leading authorities this book provides an extensive overview of variation in group composition across all major primate taxa using up to date reviews case studies evolutionary theory and theoretical models setting primates into context with birds and other mammals It will become a firm favorite with all those interested in the behavioural ecology of primates

Sex Chromosomes Franz Schrader, 1928

TEXTBOOK OF ANIMAL BEHAVIOUR, FOURTH EDITION MANDAL, FATIK BARAN, 2025-02-01 This well accepted book now in its Fourth Edition is a need based extension of the previous book The text is further enriched with more information to understand animal behaviour coherently and scientifically In the new edition the book introduces its readers with the recent topics such as eusociality social learning imitation ritualization mating sexual cannibalism gravireception and magnetoreception The book attempts to provide a reasonably suitable account of animal behaviour for undergraduate and postgraduate students Although the behaviour of animals has fascinated people for a long time behavioural biology has been introduced into syllabi very recently The study of behaviour received its important boost from the work of Charles Darwin who used the term instinct to refer to the natural behaviour of animals In the 1930s a comprehensive theory of animal behaviour emerged through the work of Konrad Lorenz and later by Niko Tinbergen Biological study of behaviour in fact came of age as a science when Lorenz Tinbergen and Karl von Frisch received the Nobel Prize for their contribution to science Observing and describing exactly what animals do is fascinating and scientific analysis of their behaviour is significant for several reasons Each species tends to have an array of stereotyped behaviours some of which are shared with related species but others are unique Ecology natural selection macroevolution microevolution and genes constitute the foundation of animal behaviour Various animal groups exhibit diverse strategies for survival and reproduction which are discussed in this book

Smuts, Those who have been privileged to watch baboons long enough to know them as individuals and who have learned to interpret some of their more subtle interactions will attest that the rapid flow of baboon behavior can at times be overwhelming In fact some of the most sophisticated and influential observation methods for sampling vertebrate social behavior grew out of baboon studies invented by scientists who were trying to cope with the intricacies of baboon behavior Barbara Smuts eloquent study of baboons reveals a new depth to their behavior and extends the theories needed to account for it While adhering to the most scrupulous methodological strictures the author maintains an open research strategy respecting her subjects by approaching them with the open mind of an ethnographer and immersing herself in the complexities of baboon social life before formulating her research design allowing her to detect and document a new level of subtlety in their behavior At the Gilgil site described in this book she could stroll and sit within a few feet of her subjects By maintaining such proximity she was able to watch and listen to intimate exchanges within the troop she was able in other words to shift the baboons well along the continuum from subject to informant By doing so she has illuminated new networks of special relationships in baboons This empirical contribution accompanies theoretical insights that not only help to explain many of the inconsistencies of previous studies but also provide the foundation for a whole new dimension in the study of primate behavior analysis of the dynamics of long term intimate relationships and their evolutionary significance At every stage of research human observers have underestimated the baboon These intelligent curious emotional and long lived creatures are capable of employing stratagems and forming relationships that are not easily detected by traditional research methods In the process of unraveling their complex social relationships Smuts has revealed that these masters of strategy and aggressive competition are equally capable of patience tenderness and concern Barbara B Smuts is professor of psychology and anthropology University of Michigan Ann Arbor She is also the author of *Primate Societies* Diptera Reprints, 1962
