The proven fuel economy of the EM6-300 Diesel is now significantly enhanced by adoption of the 4 VALVE HEAD, providing fuel efficiency and performance unsurpassed by others in its class.

The EM6-300 ECONODYNE is ideally matched to 9 and 12 speed overdrive Maxtorque 3-countershaft transmissions for optimum fuel economy, and road performance; it operates at moderate governed speeds with settings as low as 1600 rpm... effectively improving engine life, and reducing noise.

This engine also has a significant weight advantage over competitive engines of comparable rating.

Engine lubricating oil (including that for piston cooling) is cooled, then filtered by Mack's well proven E.S.L. "Plus" triple spin-on disposable oil filter system which extends oil change intervals (using genuine Mack filters, and Mack approved EO-K specification oils), and reduces service time.

Displayed below is a diagrammatic view of the ECONODYNE Charge-Air Cooling concept. Charge air leaving the turbocharger is typically at 162.7°C* (325°F), but after passing through its efficient heat exchanger ahead of the radiator it is reduced 43.3°C* (110°F); since cooler air is more dense, having a high oxygen content, air of this quality combined with fuel allows its complete combustion; and more complete combustion means that less fuel is used to produce an equal, or greater power output.

*Temperature in °C and °F are rounded off.

Cooling is performed by using cool air supplied by the engine fan as well as the ram effect of the vehicle's forward motion.
