Adaptation, Specialization, and the Theory of the Firm Birger Wernerfelt, 2016-10-27 This invaluable book provides the foundations for a new theory of the firm drawing on Birger Wernerfelt's landmark work on economic theory and the resource based view of the firm. It addresses a vigorous and long standing academic debate over what exactly a firm is both in the field of management and economics. Wernerfelt revisits his classic articles including an extensively revised *A Resource Based View of the Firm* 1984 which have been updated and synthesized to provide precise and accessible concepts and predictions. By offering future directions for research and practice this book will be of interest to students and scholars of management and economics alike.

Game Theoretic Analysis Leon A Petrosyan, David W K Yeung, 2019-10-14 This is a collection of recent novel contributions in game theory from a group of prominent authors in the field. It covers Non cooperative Games, Equilibrium Analysis, Cooperative Games and Axiomatic Values in static and dynamic contexts. Part 1 Non cooperative Games and Equilibrium Analysis. In game theory a non cooperative game is a game with competition between individual players and in which only self-enforcing e.g. through credible threats, alliances or competition between groups of players called coalitions are possible due to the absence of external means to enforce cooperative behavior e.g. contract law as opposed to cooperative games. In fact non cooperative games are the foundation for the development of cooperative games by acting as the status quo. Non cooperative games are generally analysed through the framework of equilibrium which tries to predict players' individual strategies and payoffs. Indeed equilibrium analysis is the centre of non cooperative games. This volume on non cooperative games and equilibrium analysis contains a variety of non cooperative games and non cooperative game equilibria from prominent authors in the field. Part 2 Cooperative Games and Axiomatic Values. It is well known that non cooperative behaviours in general would not lead to a Pareto optimal outcome. Highly undesirable outcomes like the prisoner's dilemma and even devastating results like the tragedy of the commons could appear when the involved parties only care about their individual interests in a non cooperative situation. Cooperative games offer the possibility of obtaining socially optimal and group efficient solutions to decision problems involving strategic actions. In addition axiomatic values serve as guidance for establishing cooperative solutions. This volume on cooperative games and axiomatic values presents a collection of cooperative games and axiomatic values from prominent authors in the field.
