

GSD AC Drive Installation Instructions

Schematic Wiring Diagram, Minimum Frequency Motor Start

- Read the instructions about thoroughly before installation and use for best results.
- Ensure the safety of people and equipment, and qualified personnel familiar with all drive shutdown, reset, program, and operate the GSD drive. Please read the instruction sheet thoroughly before using the GSD drive, especially the warnings, cautions and trouble-shooting. If you have any questions, please contact WATSONDIRECT.

PLEASE READ PRIOR TO INSTALLATION FOR SAFETY

	<ul style="list-style-type: none"> The ground terminal of the GSD drive must be grounded correctly. The grounding method must comply with the laws of the country where the GSD drive is to be installed. After power has been turned off, the capacitor in the GSD drive may cause a charge for several minutes. To prevent personal injury, always verify that the "GSD" indicator is turned off. This indicates to confirm that the DC bus voltage has dissipated sufficiently and is less than 200V before touching any terminals. Capacitor discharge will take at least 5 minutes for most GSD models. The GSD drive is an internal component of the GSD drive and is sensitive to static electricity. Please do not touch the internal boards with your bare hands before making any cable connection. Please disconnect the internal components in advance. During changes in the motor, turn off power to the GSD drive before making these changes. When the internal DC bus capacitor in the GSD drive software is in discharge state for making changes in motor or wiring. Before the software is ready to start, about 10 minutes. To prevent personal injury, allow the DC bus voltage to discharge to 0 V before making wiring changes to the GSD drive. Do not touch the GSD drive in locations subject to high temperature, direct sunlight, or harmful moisture.
	<ul style="list-style-type: none"> When supply power to the motor terminal (U, V, W) of the GSD drive. Do not touch during operation of the GSD drive, only for the built-in fan components and connector system in order for the fan before attempting to service the GSD drive. Do not use the fan for internal components. The same conditions in the GSD drive are easily damaged by high voltage.
	<ul style="list-style-type: none"> Long motor lead lengths may result in reflective wave due to impedance mismatch between the motor cable and the motor. Reflected wave may damage the insulation of the motor. To avoid the possibility of reflective wave damage, use an inductor cable motor with an impedance rating of 100 ohms. A shield cable inductor between the GSD drive and motor will help to mitigate reflective wave. Maximum supply voltage to the GSD drive should be less than or equal to 200VAC with 60 Hz depending on GSD model. Maximum supply current capacity should be less than or equal to 200A for all GSD models. The GSD drive is not to be installed in a place, such as confined and dry location, free from excessive gases or vapors. The GSD drive must be stored within an ambient temperature range from -40°C to +60°C, and relative humidity range of 0% to 95% without condensation. Do not apply 48V power to the GSD drive with the fan cover removed. Removing a fault of the GSD drive, wait 5 seconds before pressing the 48V key. To improve power factor, install a power factor corrector of the GSD drive. Do not install power capacitor capacitor in the main AC supply circuit to the GSD drive to prevent drive fault due to over current.

Ambient (Notes)

- At temperature 40°C (104°F), 50A/60 single phase input, current of the terminals (the capability of the power input power, please refer to Figure 1) of the GSD drive (GSD drive) is shown in the following table.
- Ground from the power supply.
- One power to the motor is 2.0W to 7.5, 7.5 to 15W and 15W to 30W (single motor only).
- Ground to the motor.
- After use (GSD drive) must be wired through appropriate A.C. safety rated conductors in all drive the factory installation must be left in place.

With the correct wiring, the drive can be operated in the frequency range the motor and drive installation for the "Frequency Inverter" (GSD drive) to configure the drive for frequent operation.

Recommended Safety Notes

We strongly recommend that customers use the GSD safety features.

The Safe Torque Off (STO) function turns off the power supplied to the motor through the feedback, or that the motor cannot produce torque. This method of removing power from the motor is considered an emergency stop, also known as "hold to stop".

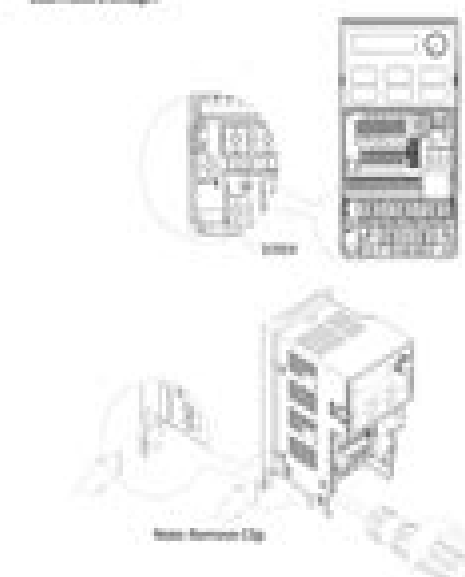

To use the feature, disconnect the appropriate factory-installed jumper and wire a safety relay or safety PLC as shown. The 0V line position should be wired through a safety relay or PLC to meet category 3 safety requirements. See the manual Appendix 1 for wiring the GSD with STO.

Motor Selection

AC source selection

If the power distribution system supplying the GSD drive is a floating AC or an ungrounded ground system (including most 100V inputs), the RFI jumper must be removed. Removing the RFI jumper increases the internal RFI capacitor filter capacitor between the GSD drive frame and chassis to avoid damaging these capacitors and according to IEC 61800-3 to reduce ground leakage current.
