Uncertainty analysis is a key component of national GHG inventory analyses. The issues that are raised by the authors in this volume and the role that uncertainty analysis plays in many of their arguments and/or proposals highlight the importance of such efforts. Topics include bottom up versus top down emission inventory approaches, compliance and verification issues, signal detection and analysis techniques, compliance with the Kyoto Protocol and the role of uncertainty in emissions trading schemes.

Sustainable Finance and Banking Marcel Jeucken, 2010-09-23. Banking and finance play a fundamental role in public policy and economic performance as well as in all forms of commerce and industry. They are crucial in determining whether society from governments to individual consumers succeeds in following an environmentally sustainable path. However, those working in the financial sector are largely unaware of the rationale and pressures for sustainable development and its bearing on their work, while those in the relevant research and policy areas commonly overlook how vital the financial sector is for progress. Marcel Jeucken sets out to rectify this state of affairs in a style which is accessible to those with no experience of environmental finance issues. He provides a comprehensive account of their interdependence, why the financial sector is crucial to achieving sustainability and why the triple bottom line of commercial, environmental and social success points the way forward for banking. From a systematic assessment of major banks around the world, he presents a comprehensive account of current best practice, an analysis of the differences in approach and performance and recommendations of actions and policies for improved performance that will contribute to sustainable development.
