How to Change Minds About Our Changing Climate Seth B. Darling, Douglas L. Sisterson, 2014-07-29 The book to spark action on the defining challenge of our time In our post truth world there s only one place to turn to if we want to live in reality science And the research on climate change is clear It s real it threatens us all and human activity is the primary cause This essential handbook dismantles all the most pernicious misunderstandings spread by deniers and replaces them with the truth Faced with an imperiled planet that we must urgently work to save we don t have time for anything else

Evidence-Based Climate Science Don Easterbrook, 2016-09-16 Evidence Based Climate Science Data Opposing CO2 Emissions as the Primary Source of Global Warming Second Edition includes updated data related to the causes of global climate change from experts in meteorology geology atmospheric physics solar physics geophysics climatology and computer modeling This book objectively gathers and analyzes scientific data concerning patterns of past climate changes influences of changes in ocean temperatures the effect of solar variation on global climate and the effect of CO2 on global climate This analysis is then presented as counter evidence to the theory that CO2 is the primary cause behind global warming Increasingly scientists are pointing to data which suggests that climate changes are a result of natural cycles which have been occurring for thousands of years Unfortunately global warming has moved into the political realm without enough peer reviewed research to fully validate and exclude other more natural causes of climate change For example there is an absence of any physical evidence that CO2 causes global warming so the only argument for CO2 as the cause of warming rests entirely in computer modeling Thus the question becomes how accurate are the computer models in predicting climate What other variables could be missing from the models In order to understand modern climate changes we need to look at the past history of climate changes Vast amounts of physical evidence of climate change over the past centuries and millennia have been gathered by scientists Significant climate changes have clearly been going on for many thousands of years long before the recent rise in atmospheric CO2 Evidence Based Climate Science Data Opposing CO2 Emissions as the Primary Source of Global Warming Second Edition documents past climate changes and presents physical evidence for possible causes Provides scientific evidence for issues related to global climate change that is not readily available elsewhere Offers detailed analysis of temperature measurements with the goal of helping readers to understand conflicting claims about global warming heard every day in the news media Presents real time data on polar ice Presents the real time effect of CO2 on global warming rather than forecasts based on computer models

Toxic Loopholes Craig Collins, 2010-03-08 The EPA was established to enforce the environmental laws Congress enacted during the 1970s Yet today lethal toxins still permeate our environment causing widespread illness and even death Toxic Loopholes investigates these laws and the agency charged with their enforcement to explain why they have failed to arrest the nation s rising environmental crime wave and clean up the country s land air and water This book illustrates how weak laws legal loopholes and regulatory negligence harm everyday people

struggling to clean up their communities It demonstrates that our current system of environmental protection pacifies the public with a false sense of security dampens environmental activism and erects legal barricades and bureaucratic barriers to shield powerful polluters from the wrath of their victims After examining the corrosive economic and political forces undermining environmental law making and enforcement the final chapters assess the potential for real improvement and the possibility of building cooperative international agreements to confront the rising tide of ecological perils threatening the entire planet Net ZERO: Foundations, Technologies and Strategic Innovation Farooq Sher, 2025-11-28 Net Zero A

Blueprint for Global Sustainability is a profound exploration of the crucial journey toward achieving net zero emissions to combat climate change and global warming It serves as an essential guide in climate action literature delving into the complexities of climate change mitigation and emphasizing the necessity of global net zero emissions The book examines both the technological advancements such as renewable energy and carbon capture and the socio economic and ethical implications of this endeavor It further explores the significance of achieving net zero emissions across various industries including business chemicals manufacturing aviation heat electricity building and power sectors emphasizing the collective effort needed for sustainability Equips readers with a holistic understanding of Net Zero s potential for climate resilience and sustainable progress Provides readers with practical and relevant information enabling them to implement effective strategies for achieving net zero emissions Examines emerging trends future outlooks and anticipated technological advancements in the realm of net zero emissions *Structure and Agent in the Scientific Diplomacy of Climate Change* T.

Skodvin, 2006-01-10 Research input constitutes a key component in the development of international environmental regime formation Science policy interaction is however complex and difficult particularly because it is an encounter between two distinct systems of behaviour the scientific ideal of impartiality and disinterestedness and the political reality of interest realisation and strategic behaviour This study analyses the extent to which and how the institutional framework within which the science policy dialogue takes place through conscious design can be utilised as an instrument to handle obstacles and barriers immanent of science policy interaction and thereby serve as an instrument to enhance the effectiveness of the dialogue Also the impact of actor behaviour particularly behaviour taking the form of leadership performance is investigated This book provides a detailed and in depth empirical study of science policy interaction in the Intergovernmental Panel on Climate Change IPCC from its establishment in 1988 to the provision of the Second IPCC Assessment Report in 1995 The main focus of the empirical investigation is on Working Group I of the IPCC *Climate Change and People on the Move*

Fanny Thornton, 2018-10-24 This book applies a justice framework to analysis of the actual and potential role of international law with respect to people on the move in the context of anthropogenic climate change That people are affected by the impacts of climate change is no longer doubted including with implications for people movement migration displacement relocation etc Climate Change and People on the Move tackles unique questions concerning international responsibility for

people movement arising from the inequities inherent to climate change Corrective and distributive justice provide the analytical backbone and are explored in a substantial theoretical chapter and then applied to subsequent contextual analysis Corrective justice supports analysis as to whether people movement in the climate change context could be conceived or framed as harm loss or damage which is compensable under international law either through fault centred regimes or no fault regimes i e insurance Distributive justice supports analysis as to whether such movement could be conceived or framed as a disproportionate burden either for those faced with movement or those faced with sheltering people on the move from which duties of re distribution may stem This book contributes to the growing scholarship and analysis concerning international law or governance and people movement in response to the impacts of climate change by investigating the bounds of the law where the phenomenon is viewed as one of in justice

Environmental Journalism Henrik Bodker,Irene Neverla,2014-10-29 Environmental journalism is an increasingly significant area for study within the broader field of journalism studies It connects the concerns of politics science business culture and the natural world whilst also exploring the boundaries between the local regional and global A central and typical focus for its concerns are the global summits convened to share scientific knowledge about global warming and to formulate policies to mitigate its consequences in particular locales But reporting environmental change creates difficulties for journalists who are often ill equipped to resolve the uncertainties in the disputed scientific accounts of climate change This research based collection focuses on aspects of environmental journalism in Australia France Norway Sweden the UK and the USA Contributors present case studies of media reporting of the environment and explore considerations of objectivity and advocacy in journalistic coverage of the environment and climate change This book was originally published as a special issue of Journalism Studies 71st Annual Discussion and Debate Source Book ,1997
