In your textbook you will notice that on some pages a key-shaped icon appears next to a brief description of a feature on your graphing calculator. In this guide the page number in the textbook on which each of these icons occurs is shown, as well as the key word or phrase that appears in the box, followed by a detailed description of how to use this feature on your TI-83 Plus graphing calculator. Each feature is also given its own number for easy reference.

## 1 Negative and Subtract

You may have noticed that the calculator has two keys with a minus sign on them. The  $(-)$  key in the bottom row of keys is actually the **negative key**. **The negative key is used only to write a negative number.** The following numbers and expressions would be entered using the negative key:  $-5$        $-7 + 6$        $-4 + 1$        $54 / (-6)$ .

The  $-$  key in the right-hand column on the keyboard with the  $+$ ,  $\times$ , and  $\div$  keys, is the **subtraction key**. It is grouped with the other keys used to perform the basic four arithmetic operations (addition, subtraction, multiplication, and division). **The subtraction key is used between two numbers to indicate that a subtraction is to be done.** The following expressions would be entered using the blue subtraction key:  $17 - 8$        $13 \div 7 - 2$        $5 - 6(3 + 4)$ .

You can tell which of these keys has been used from the screen display, if you look closely. The negative sign produced by the negative key is one pixel (dot) shorter and placed one pixel row higher than the subtraction sign produced by the subtraction key.

Be aware that it is a common mistake among new users of the graphing calculator to press the wrong one of these two keys. If you do, sometimes you will get an error message on the calculator screen when you press ENTER to evaluate an expression. Other times the calculator will do something different from what you intend.

For example, suppose you wanted to do the subtraction  $8 - 5$  on the calculator. First do it the correct way with the blue subtraction key and press ENTER to evaluate it. Of course, you should get 3 as the answer. Now enter it the wrong way by using the negative key between the 8 and the 5 and press ENTER to evaluate it. You get an error message (ERR: SYNTAX, which you can read more about in the Error Conditions portion in the back of the manual that came with your calculator). What happened? The calculator does **not** interpret the negative key as meaning to subtract. The calculator sees this last expression as two numbers written side by side, 8 and  $-5$ . The TI-83 Plus knows that the negative key is not one of the four basic operation keys, and so it gives its error message.
