**Current Problems in Applied Mathematics and Computer Science and Systems** Anatoly Alikhanov, Pavel Lyakhov, Irina Samoylenko, 2023-06-05 This book is based on the best papers accepted for presentation during the International Conference on Actual Problems of Applied Mathematics and Computer Systems APAMCS 2022 Russia The book includes research materials on modern mathematical problems solutions in the field of scientific computing data analysis and modular computing The scope of numerical methods in scientific computing presents original research including mathematical models and software implementations related to the following topics numerical methods in scientific computing solving optimization problems methods for approximating functions etc The studies in data analysis and modular computing include contributions in the field of deep learning neural networks mathematical statistics machine learning methods residue number system and artificial intelligence Finally the book gives insights into the fundamental problems in mathematics education The book intends for readership specializing in the field of scientific computing parallel computing computer technology machine learning information security and mathematical education Life in Space Maura Phillips Mackowski, 2022-05-24 This book explores the many aspects and outcomes of NASA's research in life sciences a little understood endeavor that has often been overlooked in histories of the space agency *Applied Algebra, Algebraic Algorithms, and Error-correcting Codes* Teo Mora, 1989-05-23 In 1988 for the first time the two international conferences AAECC 6 and ISSAC 88 International Symposium on Symbolic and Algebraic Computation see Lecture Notes in Computer Science 358 have taken place as a Joint Conference in Rome July 4-8 1988 The topics of the two conferences are in fact widely related to each other and the Joint Conference presented a good occasion for the two research communities to meet and share scientific experiences and results The proceedings of the AAECC 6 are included in this volume The main topics are Applied Algebra Theory and Application of Error Correcting Codes Cryptography Complexity Algebra Based Methods and Applications in Symbolic Computing and Computer Algebra and Algebraic Methods and Applications for Advanced Information Processing Twelve invited papers on subjects of common interest for the two conferences are divided between this volume and the succeeding Lecture Notes volume devoted to ISSAC 88 The proceedings of the 5th conference are published as Vol 356 of the Lecture Notes in Computer Science **The Gentleman's journal** ,1870 **The JSC Research and Development Annual Report 1993** ,1994 **Applied Algebra, Algebraic Algorithms, and Error-correcting Codes** ,1988 **English Mechanic and World of Science** ,1884 *English Mechanics and the World of Science* ,1880 The Educational Times, and Journal of the College of Preceptors ,1908 **English Mechanic and Mirror of Science** ,1880 **Lectures on Functor Homology** Vincent Franjou, Antoine Touzé, 2015-12-08 This book features a series of lectures that explores three different fields in which functor homology short for homological algebra in functor categories has recently played a significant role For each of these applications the functor viewpoint provides both essential insights and

new methods for tackling difficult mathematical problems In the lectures by Aur lien Djament polynomial functors appear as coefficients in the homology of infinite families of classical groups e g general linear groups or symplectic groups and their stabilization Djament s theorem states that this stable homology can be computed using only the homology with trivial coefficients and the manageable functor homology The series includes an intriguing development of Scorichenko s unpublished results The lectures by Wilberd van der Kallen lead to the solution of the general cohomological finite generation problem extending Hilbert s fourteenth problem and its solution to the context of cohomology The focus here is on the cohomology of algebraic groups or rational cohomology and the coefficients are Friedlander and Suslin s strict polynomial functors a conceptual form of modules over the Schur algebra Roman Mikhailov s lectures highlight topological invariants homotopy and homology of topological spaces through derived functors of polynomial functors In this regard the functor framework makes better use of naturality allowing it to reach calculations that remain beyond the grasp of classical algebraic topology Lastly Antoine Touz s introductory course on homological algebra makes the book accessible to graduate students new to the field The links between functor homology and the three fields mentioned above offer compelling arguments for pushing the development of the functor viewpoint The lectures in this book will provide readers with a feel for functors and a valuable new perspective to apply to their favourite problems
