Alhaidari, Eric J. Heller, Hashim A. Yamani, Mohamed S. Abdelmonem, 2008-03-20 Although introduced 30 years ago the J matrix method has witnessed a resurgence of interest in the last few years In fact the interest never ceased as some authors have found in this method an effective way of handling the continuous spectrum of scattering operators in addition to other operators The motivation behind the introduction of the J matrix method will be presented in brief The introduction of fast computing machines enabled theorists to perform calculations although approximate in a conveniently short period of time This made it possible to study varied scenarios and models and the effects that different possible parameters have on the final results of such calculations The first area of research that benefited from this opportunity was the structural calculation of atomic and nuclear systems The Hamiltonian element of the system was set up as a matrix in a convenient finite bound state like basis A matrix of larger size resulted in a better configuration interaction matrix that was subsequently diagonalized The discrete energy eigenvalues thus obtained approximated the spectrum of the system while the eigenfunctions approximated the wave function of the resulting discrete state Structural theorists were delighted because they were able to obtain very accurate values for the lowest energy states of interest **Hybrid PET/MR Neuroimaging** Ana M.
