Lg7 Design Guide:

Interdisciplinary Design Hanif Kara, 2022-03-07 Architects and engineers both claim to be designers though how they define design and the approaches they use to realize it vary widely. However their interaction has also created some of the world's most memorable enduring and impressive buildings. The unprecedented impact of digital technologies illuminates the complexity and non linearity of the process that these designers go through while massively expanding both the ability to visualize and represent forms and to analyze their structural behavior. It has obviously changed both architecture and engineering and so also the potential for interaction between them. Interdisciplinary Design began as a course at Harvard GSD attended by graduate students in architecture and also by MIT graduate students in structural engineering and computation. In this course students and instructors examined a series of built projects in order to develop new viewpoints and communication across disciplinary boundaries in teaching practice and construction. *Facilities Manager's Desk*

Korhan, 2019-09-25 A shelter is one of the physiological needs according to Maslow's Hierarchy of Needs which lies at the bottom of the pyramid. People spend around 90% of their time in shelters or in today's words buildings. They sleep, eat, work, relax, exercise, play, are born and die in these buildings. In fact they live within walls. Therefore an indoor environment is crucial for their health and safety. This book therefore addresses the issues related to the impact of a sustainable, healthy and comfortable indoor environment on the quality of life and perceives the required indoor conditions for productivity and effectiveness. Thereby this book is designed to include issues and extensive discussions on thermal comfort, indoor air quality, visual comfort, acoustic comfort, productivity and indoor health and safety. The concepts of heating, ventilation, air conditioning, external temperature, air pollution, sick building, indoor pollutants, illumination, glare, indoor lighting, daylight, noise, construction materials, sound intensity and furniture on the indoor environment are described in detail in this book.
