Humanities and Art History Kathryn Brown, 2020-04-15 The Routledge Companion to Digital Humanities and Art History offers a broad survey of cutting edge intersections between digital technologies and the study of art history museum practices and cultural heritage The volume focuses not only on new computational tools that have been developed for the study of artworks and their histories but also debates the disciplinary opportunities and challenges that have emerged in response to the use of digital resources and methodologies Chapters cover a wide range of technical and conceptual themes that define the current state of the field and outline strategies for future development This book offers a timely perspective on trans disciplinary developments that are reshaping art historical research conservation and teaching This book will be of interest to scholars in art history historical theory method and historiography and research methods in education

Methodology in Sports History Wray Vamplew, Dave Day, 2018-12-07 The process of converting the past into history involves engagement with a multitude of different sources and methods and sports historians inevitably participate in the same debates over approaches and methodologies as their counterparts in other historical disciplines At its heart history

remains a genre of empirical knowledge that is based upon the remains of the past and without suitable evidence there can be no sports history A burgeoning range of sources has stimulated new ways of thinking and a significant expansion in the sports historian s evidentiary base as textual sources have been supplemented by photos films and cartoons uniforms architecture maps and landscapes and material culture more generally This book deals with some of these innovations It is divided into two sections the first offering chapter length studies of particular methodologies and the second brief responses from experts in their fields to the question what can sports historians learn from other disciplines *Explaining the History of American Foreign Relations* Frank Costigliola, Michael J. Hogan, 2016-03-09 This volume presents substantially revised and new essays on methodology and approaches in foreign and international relations history **Exploring Big Historical Data: The Historian's Macroscopic (Second Edition)** Shawn Graham, Ian Milligan, Scott B Weingart, Kimberley Martin, 2022-02-24 Every day more and more kinds of historical data become available opening exciting new avenues of inquiry but also new challenges This updated and expanded book describes and demonstrates the ways these data can be explored to construct cultural heritage knowledge for research and in teaching and learning It helps humanities scholars to grasp Big Data in order to do their work whether that means understanding the underlying algorithms at work in search engines or designing and using their own tools to process large amounts of information Demonstrating what digital tools have to offer and also what digital does to how we understand the past the authors introduce the many different tools and developing approaches in Big Data for historical and humanistic scholarship show how to use them what to be wary of and discuss the kinds of questions and new perspectives this new macroscopic perspective opens up Originally authored live online with ongoing feedback from the wider digital history community Exploring Big Historical Data breaks new ground and sets the direction for the conversation into the future Exploring Big Historical Data should be the go to resource for undergraduate and graduate students confronted by a vast corpus of data and researchers encountering these methods for the first time It will also offer a helping hand to the interested individual seeking to make sense of genealogical data or digitized newspapers and even the local historical society who are trying to see the value in digitizing their holdings

Television History, the Peabody Archive, and Cultural Memory Ethan Thompson, Jeffrey P. Jones, Lucas Hatlen, 2019 Television History The Peabody Archive and Cultural Memory is the product of a multiyear collaboration between the Peabody Awards program and over a dozen media scholars with the intent to uncover explore and analyze historical television programming contained in the Peabody Awards archives at the University of Georgia It is an intentional effort to look both wider and deeper than the well known canon of U S broadcast history that dominates popular memory of the relationship of television to American society The Peabody Archive is especially suited to this project because it is an archive of programming produced and submitted not just by the big networks in New York or Los Angeles but by stations and media producers across the nation and more recently around the world This project asks how might these programs change our

understanding of television's past and impact the ways we think about television's present and future. What new questions can we ask and what new approaches should we take as a result of seeing and experiencing this programming? The contributions in this volume offer a dramatic range of approaches for how scholars can productively engage the archive's media and physical holdings to examine and reconsider television history.

Unthought N. Katherine Hayles, 2017-04-05

N Katherine Hayles is known for breaking new ground at the intersection of the sciences and the humanities. In *Unthought* she once again bridges disciplines by revealing how we think without thinking, how we use cognitive processes that are inaccessible to consciousness yet necessary for it to function. Marshalling fresh insights from neuroscience, cognitive science, cognitive biology, and literature, Hayles expands our understanding of cognition and demonstrates that it involves more than consciousness alone. Cognition, as Hayles defines it, is applicable not only to nonconscious processes in humans but to all forms of life, including unicellular organisms and plants. Startlingly, she also shows that cognition operates in the sophisticated information processing abilities of technical systems. When humans and cognitive technical systems interact, they form cognitive assemblages as found in urban traffic control, drones, and the trading algorithms of finance. Capital, for instance, and these assemblages are transforming life on earth. The result is what Hayles calls a planetary cognitive ecology, which includes both human and technical actors and which poses urgent questions to humanists and social scientists alike. At a time when scientific and technological advances are bringing far-reaching aspects of cognition into the public eye, *Unthought* reflects deeply on our contemporary situation and moves us toward a more sustainable and flourishing environment for all beings.
