considered as acidic products of special importance for the enrichment of our diet and resulting from the desired or controlled oxidation of ethanol containing liquid substrates. The traditional use and integration of vinegars in numerous cultures can be traced back to ancient times. In fact, the cultural heritage of virtually every civilization includes one or more vinegars made by the souring action of microorganisms following alcoholic fermentation. It has been documented that the Egyptians, Sumerians, and Babylonians had experience and technical knowledge in making vinegar from barley and any kind of fruit. Vinegar was very popular both in ancient Greece and Rome where it was used in food preparations and as a remedy against a great number of diseases. In Asia, the first records about vinegar date back to the Zhou Dynasty 1027-221 BC and probably China's ancient rice wines may have originally been derived from fruit for which malted rice was substituted later. The historical and geographical success of vinegars is mainly due to the low technology required for their production and to the fact that several kinds of raw materials rich in sugars may easily be processed to give vinegar. In addition, vinegars are well known and accepted as safe and stable commodities that can be consumed as beverages, health drinks, or added to food as preservatives or as flavoring agents.
