(CHAPTER# 17 + 21)

Time: 60 min

Marks: 70

## CHAPTER#17

1. Very weak magnetic field produced by brain can be detected by:  
a. MRI                                      b. CAT Scanner                                      c. Squids                                      d. Compass
2. In extrinsic semiconductors the ratio of doping is of the order of:  
a. 1 atom to  $10^4$                                       b. 1 atom to  $10^6$                                       c. 1 atom to  $10^8$                                       d. 1 atom to  $10^{10}$
3. Which one pair belongs to acceptor impurity?  
a. Boron, gallium                                      b. arsenic, phosphorus                                      c. antimony, indium                                      d. arsenic, antimony
4. A vacant or partially filled band is called \_\_\_\_\_ band.  
a. Valance                                      b. conduction                                      c. fermi                                      d. forbidden
5. The most stable metal of making permanent magnet is:  
a. Iron                                      b. aluminum                                      c. steel                                      d. copper
6. In p-type substances, the majority charge carriers are:  
a. Electrons                                      b. protons                                      c. neutrons                                      d. Holes
7. In n-type substances, the majority charge carriers are:  
a. Electrons                                      b. protons                                      c. neutrons                                      d. holes
8. The net charge on an n-type substance is:  
a. 0.25 volts                                      b. 0.3 volts                                      c. 0.7 volts                                      d. zero
9. The forbidden energy gap in insulators is of the order of:  
a. Several eV                                      b. 1 eV                                      c. 0.5 eV                                      d. zero
10. The forbidden energy gap between valance and conduction band of a semiconductor is of the order of:  
a. 1 eV                                      b. 2 eV                                      c. 10 eV                                      d. 28.2 eV
11. The critical temperature of Aluminum is:  
a. 1.18 K                                      b. 3.72 K                                      c. 7.32 K                                      d. 8.2 K
12. The critical temperature for Mercury is:  
a. 1.18 K                                      b. 4.2 K                                      c. 3.7 K                                      d. 7.2 K
13. The critical temperature for lead is:  
a. 1.18 K                                      b. 4.2 K                                      c. 3.7 K                                      d. 7.2 K
14. The critical temperature for tin is:  
a. 1.18 K                                      b. 4.2 K                                      c. 3.72 K                                      d. 7.2 K
15. Yttrium barium copper oxide ( $\text{YBa}_2\text{Cu}_3\text{O}_7$ ) is superconductor at a temperature:  
a. 163 K ( - 110°C)                                      b. 77 K                                      c. 4.2 K                                      d. 125 K
16. The boiling point of liquid nitrogen is:  
a. 77 K                                      b. 125 K                                      c. 7.2 K                                      d. 1.18 K
