

Experiments of Hydraulic Level Measurement

EXPERIMENT 1 OF 4

Level measurement of bridges is achieved 3 months in order to ensure constant measurement results for railway safety. Other differences, therefore, beyond the determination of an average by 1 kg, the mean constant transport measurement must be observed. The purpose of this experiment is to demonstrate the variation of this technique.

The diagram method involves a process measuring different sections within the span of the bridge for varying measurement level readings.

The second method is measurement using a bridge system and measuring the level position for the bridge span.

EXPERIMENT 2 OF 4

- 1) Measurement method of measuring pressure readings across the level of liquid in a tank.
- 2) Measure the effect that the location of the measuring device has on the measured level reading.
- 3) Constructive bridge system measurement of 100 kg in a tank.
- 4) Measure the effect that the measurement device of the bridge system has on the measured level reading.
