# CENTRAL & INSCRIBED ANGLES

## Notes & Practice

A circle is the collection of all points in the plane that lie a fixed distance from a fixed point, known as the circle's center.

You may already recognize two parts of a circle from previous lessons: the radius and diameter of a circle. Now, let's introduce new terms:

**CHORD:** A chord is a line segment joining two points on the circle. It does not necessarily pass through the center of the circle.

**SECANT:** A secant is a line that intersects a circle at two distinct points. In other words, it is a line that "cuts" through the circle.

**TANGENT:** A tangent is a line that touches the circle at exactly one point.

Circles are often named by their center. Circle O is shown in the diagram to the left.

Identify the segments and lines that represent the parts of circle O.
