

**INNOVATOR SERIES UNITS
RWH21/CB30MWH**

The Lennox Innovator Aquaplus™ system consists of an RWH21 heating module and a CB30MWH blower coil. The Aquaplus system provides potable hot water and cool dehumidified air to the conditioned space.

The RWH21 compressor pumps refrigerant through an independent circuit in the CB30MWH blower coil. The refrigerant absorbs heat in the indoor coil and is cycled through a coaxial tube-in-tube heat exchanger located in the RWH21. Water, cycled by the RWH21 water pump, runs through one tube of the heat exchanger; refrigerant passes through the other. The water absorbs heat from the refrigerant and is pumped to the electric water heater for use or storage.

The RWH21 demand cycle is controlled by the thermostat in the electric water heater. **The RWH21 and the electric water heater do not operate at the same time.** The RWH21 module is the primary heating unit.

This manual is divided into sections which discuss the major components, charging procedure and operating procedure. Information contained in this manual is intended for use by qualified service technicians only. All specifications in this manual are subject to change. For CB30MWH service material and specifications see Unit Information Corp. 9601-L1.

⚠ CAUTION

Turn power OFF at the main service panel before servicing the RWH21 unit or electric water heater. Dangerous high voltage exists at the line side of the circuit breaker AND electric water heater when the breaker is OFF.
