

HP25 SERIES UNITS

The HP25 is a high efficiency residential split-system heat pump which features a scroll-compressor. It operates much like a standard heat pump, but the HP25's scroll compressor is unique in the way that it compresses refrigerant. Several models are available in sizes ranging from 1-1/2 through 5 tons. The series uses expansion valves in the outdoor unit and in the indoor unit.

This manual is divided into sections which discuss the major components, refrigerant system and charging procedures, maintenance and operation sequences. All specifications in this manual are subject to change.

I-APPLICATION

All major components (indoor blower/coils) must be matched according to Lennox recommendations for the compressor to be covered under warranty. Refer to the Engineering Handbook for approved system matchups. A misapplied system will cause erratic operation and can result in early compressor failure.

II-SCROLL COMPRESSOR

The scroll compressor design is simple, efficient and requires few moving parts. A cutaway diagram of the scroll compressor is shown (at left). The scrolls are located in the top of the compressor can and the motor is located in the bottom of the compressor can. The oil level is immediately below the motor.

The scroll is a simple compression concept centered around the unique spiral shape of the scroll and its inherent properties. Figure 1 shows the basic scroll form. Two identical scrolls are mated together forming concentric spiral shapes (Figure 2). One scroll remains stationary, while the other is allowed to orbit (Figure 3). Note that the orbiting scroll does not rotate or turn but merely orbits the stationary scroll.
