Understanding Developmental Dyslexia: Linking Perceptual and Cognitive Deficits to Reading Processes

Pierluigi Zoccolotti, Peter F. de Jong, Donatella Spinelli, 2016-06-24

Understanding the mechanisms responsible for developmental dyslexia DD is a key challenge for researchers A large literature mostly concerned with learning to read in opaque orthographies emphasizes phonological interpretations of the disturbance Other approaches focused on the visual perceptual aspects of orthographic coding Recently this perspective was supported by imaging data showing that individuals with DD have hypo activation in occipito temporal areas a finding common to both transparent and opaque orthographies Nevertheless it is difficult to infer causal relationships from activation data Accommodating these findings within the cognitive architecture of reading processes is still an open issue This is a general problem which is present in much of the literature For example several studies investigating the perceptual and cognitive abilities that distinguish groups of children with and without DD failed to provide explicit links with the reading process Thus several areas of investigation e g acoustic deficits or magnocellular deficiencies have been plagued by replication failures Furthermore much research has neglected the possible contribution of comorbid symptoms By contrast it is now well established that developmental disorders present a large spectrum of homotopic and heterotopic comorbidities that make causal interpretations problematic This has led to the idea that the etiology of learning difficulties is multifactorial thus challenging the traditional models of DD Recent genetic studies provide information on the multiple risk factors that contribute to the genesis of the disturbance Another critical issue in DD is that much of the research has been conducted in English speaking individuals However English is a highly irregular orthography and doubts have been raised on the appropriateness of automatically extending interpretations based on English to other more regular orthographies By contrast important information can be gotten from systematic comparisons across languages Thus the distinction between regular and irregular orthographies is another potentially fruitful area of investigation Overall in spite of much research current interpretations seem unable to integrate all available findings Some proposals focus on the cognitive description of the reading profile and explicitly ignore the distal causes of the disturbance Others propose visual acoustic or phonological mechanisms but fail to link them to the pattern of reading impairment present in different children The present Research Topic brings together studies based on different methodological approaches i e behavioural studies examining cognitive and

psycholinguistic factors eye movement investigations biological markers neuroimaging and genetic studies involving dyslexic groups with and without comorbid symptoms and in different orthographies transparent and opaque to identify the mechanisms underlying DD The RT does not focus on a single model or theory of dyslexia but rather brings together different approaches and ideas which we feel are fruitful for a deeper understanding developmental dyslexia

Literacy Instruction for Students who are Deaf and Hard of Hearing Susan R. Easterbrooks PhD, Jennifer Beal-Alvarez MA, 2013-02-14 Most students who are deaf or hard of hearing DHH struggle with acquiring literacy skills some as a direct result of their hearing loss some because they are receiving insufficient modifications to access the general education curriculum and some because they have additional learning challenges necessitating significant program modifications Additionally instructional practices for DHH students tend to be directed toward two sub populations of DHH students those with useable access to sound and those without *Literacy Instruction for Students who are Deaf and Hard of Hearing* describes current evidence based practices in teaching literacy for DHH students and provides practitioners and parents with a process for determining whether a practice is or is not evidence based Easterbrooks and Beal Alvarez describe the importance of the assessment process in providing on going progress monitoring to document students literacy growth as a primary means to direct the course of instruction They address the five key areas of instruction identified by the National Reading Panel phonemic awareness phonics fluency vocabulary and comprehension In this concise guidebook the authors present the role of assessment in the literacy process an overview of evidence based practices and in the absence of such information those practices supported by causal factors across the National Reading Panel s five areas of literacy They also review the evidence base related to writing instruction present case studies that reflect the diversity within the DHH population and review the challenges yet to be addressed in deaf education
