Natural Science Examinations Grade9 November 2014 Gauteng:

Strange Bedfellows Ina Park, 2021-02-02 Joyful and funny Park uses science compassion humor diverse stories and examples of her own shame free living to take the stigma out of these infections The New York Times With curiosity and wit Strange Bedfellows rips back the bedsheets to expose what really happens when STDs enter the sack Sexually transmitted diseases have been hidden players in our lives for the whole of human history with roles in everything from World War II to the growth of the Internet to The Bachelor But despite their prominence STDs have been shrouded in mystery and taboo for centuries which begs the question why do we know so little about them Enter Ina Park MD who has been pushing boundaries to empower and inform others about sexual health for decades With Strange Bedfellows she ventures far beyond the bedroom to examine the hidden role and influence of these widely misunderstood infections and share their untold stories Covering everything from AIDS to Zika Park explores STDs on the cellular individual and population level She blends science and storytelling with historical tales real life sexual escapades and interviews with leading scientists weaving in a healthy dose of hilarity along the way The truth is most of us are sexually active yet we re often unaware of the universe of microscopic bedfellows inside our pants Park aims to change this by bringing knowledge to the masses in an accessible no nonsense humorous way helping readers understand the broad impact STDs have on our lives while at the same time erasing the unfair stigmas attached to them A departure from the cone of awkward silence and shame that so often surrounds sexual health Strange Bedfellows is the straight shooting book about the consequences of sex that all curious readers have been looking for

Differentiation, Tissue Adaptation and Function of Memory T Cells Weiguo Cui, Carmen Gerlach, Klaas Van Gisbergen, 2020-06-16 Upon antigen encounter naive T cells differentiate into i effectors that combat infected or malignant cells and at later time points into ii memory cells that provide long lasting immunity This differentiation process allows some T cells to leave the confines of secondary lymphoid organs and to enter peripheral tissues in search of pathogens or tumor cells These different environments pose specific challenges for effector and memory T cells to maintain homeostasis T cells directed into the lungs are likely to encounter higher levels of oxygen but lower amounts of nutrients than those directed into the intestinal epithelium In addition to oxygen tension and nutrient concentrations other key factors such as the commensal flora and stromal components create unique conditions that require tissue specific adaptations of T cells These steady state conditions can dramatically change during infection when inflammatory mediators and T cell growth factors are released requiring the immediate response of T cells The gradual changes imposed by growing tumors can also be challenging for T cells due to competition with rapidly cycling tumor cells that deplete essential resources of oxygen and glucose The strategies that T cells employ to respond to the diverse cues from their surroundings are the focus of current research It appears that next to circulating memory T cells that are confined to the circulation and those that survey all of the peripheral tissues dedicated populations of resident memory T cells exist that can optimally adapt to the local

circumstances within each tissue Restrictions on the metabolic requirements of T cells residing in tumor tissue have been found to directly impact on effector functions such as cytokine production The fundamental principles of how the machinery of T cells can translate local cues into tissue specific differentiation processes are fascinating and warrant further investigation
