Natural Science Grade9 Caps Question Paper:

Drawing for Science Education Phyllis Katz, 2017-03-23 This book argues for the essential use of drawing as a tool for science teaching and learning. The authors are working in schools, universities and continual science learning CSL settings around the world. They have written of their experiences using a variety of prompts to encourage people to take pen to paper and draw their thinking, sometimes direct observation and in other instances their memories. The result is a collection of research and essays that offer theory, techniques, outcomes and models for the reader. Young children have provided evidence of the perceptions that they have accumulated from families and the media before they reach classrooms. Secondary students describe their ideas of chemistry and physics. Teacher educators use drawings to consider the progress of their undergraduates' understanding of science teaching and even their moral/ethical responses to teaching about climate change. Museum visitors have drawn their understanding of the physics of how exhibit sounds are transmitted. A physician explains how the history of drawing has been a critical tool to medical education and doctor/patient communications. Each chapter contains samples, insights and where applicable, analysis techniques. The chapters in this book should be helpful to researchers and teachers alike across the teaching and learning continuum. The sections are divided by the kinds of activities for which drawing has historically been used in science education: An instance of observation: Audubon, Linnaeus. A process: how plants grow over time, what happens when chemicals combine. Conceptions of what science is and who does it. Images of identity development in science teaching and learning. **Resources in Education**, 1992-07 *Education and climate change* Samantha Govender, Mncedisi C. Maphalala, Dumisani W. Mncube, 2025-06-15 The book highlights the critical yet often overlooked role of education in combating climate change. It advocates for a transformative educational framework that integrates social/emotional learning and interdisciplinary collaboration. Traditional education, which focuses solely on factual knowledge, is deemed insufficient. Instead, education should foster empathy, provide hands-on experiences and encourage active engagement in climate solutions. The book outlines various ways education can drive climate action, such as raising awareness, preparing individuals for green jobs, empowering communities and fostering innovation in higher education. It highlights the interconnectedness of climate change and education, particularly for marginalised populations, showing how quality education can enhance both mitigation and adaptation strategies while supporting Sustainable Development Goal SDG 4 and SDG 13. Key chapters discuss successful initiatives such as the Keep it Cool Climate Change Education KIC CCE project in South Africa and offer strategies for integrating climate change education into subjects like Natural Sciences and Geography. Ultimately, the book positions education as a strategic tool for promoting sustainable development and building climate resilience. New research findings presented in the book connect education to climate change, highlighting education as both a tool to address climate issues and a domain affected by these issues. The book integrates empirical evidence, innovative theories and practical examples to ensure intellectual integrity and academic rigour. It introduces a unique

framework that emphasises social emotional learning action oriented teaching and interdisciplinary collaboration Case studies such as the KIC CCE initiative in South Africa illustrate these concepts The book critiques traditional models and advocates for transformative approaches to climate education aligning with SDG 4 Quality Education and SDG 13 Climate Action It also highlights the significance of teacher preparedness community empowerment gender equality and innovation providing valuable insights for scholars policymakers and practitioners addressing the climate crisis
